

'45

One of the greatest military feats during the Second World War was the transformation of the German force's activities in the weeks following the battles in Holland and the German border, where the Allies had finally inflicted the greatest catastrophes of modern war on them.Somewhat the Germans found the strength to halt the Allied advance in its tracks and to prolong the war to 1945. This book is the epic story of those last eight months of the war in northern Europe.

The Heroes of '45 by Ron Mielech The Heroes of '45 by Ron Mielech is an enchanting tale of historical fiction; however, this could very easily be a story told about life in a small Kentucky town during the war. The action takes place in 1945, following thirteen-year-old Richard Townsend. During the war, Richard's father, C.F., continues his legal practice on the home front, while others of Richard's family and friends are serving their country at war. Richard is pleased that his father is safe but is disappointed that he has not served in the military. Richard could not possibly have known at the beginning of summer how much his life would change. Through a course of events that took place by summer's end, he would realize that you don't have to fight a war to be a hero. He witnessed the heroic acts of others, including his father. Once he realized all of the truly good things his father did for others, he was proud to follow in his footsteps. And then, came the end of the war and life went on and the past gave way to the future.

The Inshore U-Boat Campaign 1944-45

By the end of 1943 the German submarine war on Atlantic convoys was all but defeated, beaten by superior technology, code-breaking and air power. With losses mounting, Dönitz withdrew the wolfpacks, but in a surprise change of strategy, following the D-Day landings in June 1944, he sent his U-boats into coastal waters, closer to home, where they could harass the crucial Allied supply lines to the new European bridgehead. Caught unawares, the British and American navies struggled to cope with a novel predicament - in shallow waters submarines could lie undetectable on the bottom, and given operational freedom, they rarely needed to make signals, so neutralizing the Allied advantages of decryption and radio direction-finding. Behind this unpleasant shock lay an even greater threat, of radically new sub-marine types known to be nearing service. Dönitz saw these as war-winning weapons, and gambled that his inshore campaign would hold up the Allied advance long enough to allow these faster and quieter boats to be deployed in large numbers. This offensive was perhaps Germany's last chance to turn the tide, yet, surprisingly, such an important story has never been told in detail before. That it did not succeed masks its full significance: the threat of quiet submarines, operating singly in shallow water, was never really mastered, and in the Cold War that followed the massive Soviet submarine fleet, built on captured German technology and tactical experience, became a very real menace to Western sea power. In this way, Dönitz's last gamble set the course of post-war anti submarine development.

45 of the hottest artists working in comics and illustration today bring their own interpretations to 45 2000 AD characters in this oversized art book celebrating the 45th Anniversary of the Galaxy's Greatest Comic. 45 YEARS OF 2000 AD To celebrate forty-five years of bringing Thrill-Power to earthlets, Tharg the Mighty has tasked forty-five of Earth's most popular comic and illustration artists to interpret the characters featured in the pages of the Galaxy's Greatest Comic, 2000 AD. Featuring all new work by Jamie Smart (Bunny vs Monkey), Hannah Templer (GLOW, TIMNT), Michael Allred (Madman, Silver Surfer), Kevin O'Neill (League of Extraordinary Gentlemen), Racheal Stott (Star Wars, Doctor Who).

The epic journey of Little Meat Man starts here! Who is Little Mean Man? Why is Little Meat Man? And why does ZIM love him so? HE LOVES HIM SO MUCH!

The German destroyer fleet of World War II consisted of nine classes: the Diether Von Roeder Class, the Leberecht Maas Class and the wartime classes Z23, Z35, Z37, Z40, Z43, Z46 and Z52. These vessels, though fewer in number than the British destroyer fleet, tended to be much bigger and more powerful than their allied counterparts. They served their country well in operations in the Channel, North Sea, the Far North and in the rescue of civilians from East Prussia during the final days of the war. This title describes their design, development and operational use from the fjords of Narvik to the final days of the war.

V hodnocení tohoto svazku edice Duel nešetří britští čtenáři superlativy. Proč? Nenajdete tu totiž jen technický popis obou letounů, jejich předností a záporů, ale také brilantní vylíčení jiných okolností, které měly na smrtelné souboje britských bombardérů a německých stíhačů podstatný vliv. Patří sem třeba nemilosrdná analýza postupu velení štábu britského letectva, neschopnost britských zpravodajských služeb i včasné nasazení technických inovací na německé straně. Autor tuto knížku přímo napěchoval trefnými a zasvěcenými postřehy a v neposlední řadě i skvělými ilustracemi a výmluvnými fotografiemi.

The M4 Sherman tank was the mainstay of the Western allies between 1942 and 1945. Fast and modern it was better than most of the tanks Britain had to offer. The American Chief of Staff claimed in November 1943 that it had been hailed widely as 'the best tank on the battlefield today'. However, by the time of the Normandy invasion of June 1944 this was not the case. The new heavy tanks being produced by the Germans were able to outclass the Sherman in both armour and armament. This title describes the development and operational use of the Sherman medium tank throughout World War II and beyond.

German Armour 1944-45

Truly an example of engineering ingenuity born out of the desperation of war, the legendary 'all-wooden' Mosquito was perhaps the best twin-engined fighter-bomber of its size to see action in World War II (1939-1945). The first bomber variant to enter service was the B Mk IV, initial examples of which were issued to No 2 Group's No 105 Sqn at Swanton Morley, in Norfolk, in November 1941. Considerably faster than the unit's previous Blenheim Mk IVs, powered by inline rather than radial engines, and made of wood instead of metal alloy, the Mosquito initially proved a challenging mount for both air and groundcrew alike.

The light cruiser was a natural development of the sailing frigate - a fast multi-purpose warship that could patrol the sea lanes, protect convoys and scout for enemy battle fleets. By the inter-war period the need for this type of ship was even more important, given the increasing need for protection from aircraft, and the need to screen the fleet from submarines or destroyers. Wartime experience had shown that the British light cruiser was one of the most versatile types of ship in the Royal Navy, able to protect other warships, bombard enemy shores, guard life-saving convoys and intercept and destroy enemy warships. These were truly the workhorses of the wartime Royal Navy. While the battleships and carriers grabbed the headlines, these sleek, elegant warships quietly got on with the job of securing control of the seas.

The new paperback edition of Khaki Drill & Jungle Green offers the most detailed examination ever published of the tropical uniforms issued to all three services in the Mediterranean theatre and in South-East Asia during World War II. The evolution of tropical uniforms under the pressure of campaign experience between 1939 and 1945 is traced in Martin Brayley's nearly 300 striking color photographs, showing live models wearing rare original uniforms and equipment, and carrying period weapons, in authentic settings.

During World War II, London was transformed into a European city, as it unexpectedly became a place of refuge for many thousands of European citizens who through choice or the accidents of war found themselves seeking refuge in Britain from the military campaigns on the Continent of Europe. In this volume, an international team of historians consider the exile groups from Belgium, France, the Netherlands, Poland, Norway and Czechoslovakia, analysing not merely the relations between the plethora of exile regimes and the British government in terms of its military and social dimensions but also the legacy of this period of exile for the politics of post-war Europe. Particular attention is paid to the Belgian exiles, the most numerous exile population in Britain during World War II.

Airborne operations have often been called a vertical envelopment, and therein lies one of the best descriptions of their value. The essence of an envelopment is to pin the enemy in place so that it can be destroyed. A strong enemy force to one's rear disrupts supplies and communications and makes one more vulnerable to an attack from the front. It also has a major psychological impact. To an aggressor the value of airborne troops, used properly, far outweighs their numerical strength. Bruce Quarrie's engaging text tells the story of the German airborne troops of the Second World War.
