10 5 The Pythagorean Theorem

Lesson 10-5 The Pythagorean Theorem. Right Triangle – a triangle with a right angle. Hypotenuse – the side opposite the right angle in a right triangle. Leg – the two side of the right triangle that form the right angle. Pythagorean Theorem – the square of the length of the hypotenuse equals the sum of the squares of the lengths of the legs(c2=a2+b2)

Lesson 10-5 The Pythagorean Theorem - Newton Local Schools

The Pythagorean Theorem states that the sum of the squared sides of a right triangle equals the length of the hypotenuse squared. You might recognize this theorem in the form of the Pythagorean equation: a 2 + b 2 = c 2. If you know the length of any 2 sides of a right triangle you can use the Pythagorean equation formula to find the length of the third side.

See Article History. Pythagorean theorem, the well-known geometric theorem that the sum of the squares on the legs of a right triangle is equal to the square on the hypotenuse (the side opposite the right angle)—or, in familiar algebraic notation, a2 + b2 = c2. Although the theorem has long been associated with Greek mathematician-philosopher Pythagoras (c. 570–500/490 bce), it is actually far older.

Pythagorean Theorem, Free Math Quiz

The Pythagorean Theorem, also known as Pythagoras' theorem, is a fundamental relation between the three sides of a right triangle. Given a right triangle, which is a triangle in which one of the angles is 90°, the Pythagorean theorem states that the area of the square formed by the longest side of the right triangle (the hypotenuse) is equal to the sum of the area of the squares formed by the other two sides of the right triangle:

Pythagoras Theorem Statement Pythagoras theorem states that " In a right-angled triangle, the square of the hypotenuse side is equal to the sum of squares of the other two sides ". The sides of this triangle have been named as Perpendicular, Base and Hypotenuse. Here, the hypotenuse is the longest side, as it is opposite to the angle 90°.

Pythagoras Theorem (Formula, Proof and Examples)

The Pythagorean theorem describes how the three sides of a right triangle are related in Euclidean geometry. It states that the sum of the squares of the sides of a right triangle equals the square of the hypotenuse. You can also think of this theorem as the hypotenuse formula.
