The ghosts that haunt our sexual pleasure were born in the Stone Age. Sex and gender taboos were used by tribes to differentiate themselves from one another. These taboos filtered into the lives of Bronze and Iron Age men and women who lived in city-states and empires. For the early Christians, all sex play was turned into sin, instilled with guilt, and punished severely. With the invention of sin came the construction of women as subordinate beings to men. Despite the birth of romance in the late middle ages, Renaissance churches held inquisitions to seek out and destroy sex sinners, all of whom it saw as heretics. The Age of Reason saw the demise of these inquisitions. But, it was doctors who would take over the roles of priests and ministers as sex became defined by discourses of crime, degeneracy, and sickness. The middle of the 20th century saw these medical and religious teachings challenged for the first time as activists, such as Alfred Kinsey and Margaret Sanger, sought to carve out a place for sexual freedom in society. However, strong opposition to their beliefs and the growing exploitation of sex by the media at the close of the century would ultimately shape 21st century sexual ambivalence. Book Two of this two-part publication traces the history of sex from the Victorian Era to present day. Interspersed with 'personal hauntings' from his own life and the lives of friends and relatives, Knowles reveals how historical discourses of sex continue to haunt us today. This book is a page-turner in simple and plain language about 'how sex got screwed up' for millennia. For Knowles, if we know the history of sex, we can get over it.

This book is based on in-depth research that triangulates information from several primary sources, to provide hitherto unknown facts about Sai Baba, village Shirdi and some of the people who visited it during the late 19th and early 20th centuries. It not only adds to the repository of knowledge about this great saint of India and the role that he played in the context of protecting his devotees during India's struggle for freedom, but additionally provides new insights by raising questions and seeking answers through analysis of rare documents drawn from the National Archives, police records and diaries pertaining to that time as well as reviewing personal documents and literature in different languages. Written in

Chicago-style Citation, it contains nine chapters dealing with different aspects of Sai Baba's life in Shirdi. The book has several rare documents and photographs of Shirdi Sai Baba and his devotees as well as compositions of Shirdi of that time. A glossary is provided at the end of the book for ease of reference. The book will be a valuable asset not just for all those who are devotees of Sai Baba and other Sadgurus, but also for students and academicians who have an interest in India's culture and history and in the means used by the British to understand and control developments in different parts of the country.

The chapters are based on papers from the MCPC 2017. The book showcases research and practice from authors that see MCP as an opportunity to extend or even revolutionize current business models. The current trends of Industrie 4.0, digital manufacturing, and the rise of smart products allow for a fresh perspective on MCP: Customization 4.0. The book places a new set of values in the centre of the debate: a world with finite resources, global population growth, and exacerbating climate change needs smart thinking to engage the most effective capabilities and resources. It discusses how Customization 4.0 fosters sustainable development and creates shared value for companies, customers, consumers, and the society as a whole. The chapters of this book are contributed by a wide range of specialists, offering cutting-edge research, as well as insightful advances in industrial practice in key areas. The MCPC 2017 has a strong focus on real life MCP applications, and this proceedings volume reflects this. MCP strategies aim to profit from the fact that people are different. Their objective is to turn customer heterogeneities into opportunities, hence addressing "long tail" business models. The objective of MCP is to provide goods and services that best serve individual customers' needs with near mass production efficiency. This proceedings volume highlights the interdisciplinary work of thought leaders, technology developers, and researchers with corporate entrepreneurs putting these strategies into practice. In this book, leading scholars analyze the important role played by copyright exceptions in economic and cultural productivity. Under the guidance of Leslie Heaphy and an editorial board of leading historians, this peer-reviewed, annual book series offers new, authoritative research on all subjects related to black baseball, including the Negro major and minor leagues, teams, and players; pre-Negro League organization and play; barnstorming; segregation and integration; class, gender, and ethnicity; the

business of black baseball; and the arts.

This book constitutes the refereed proceedings of the 10th International Conference on Asian Digital Libraries, ICADL 2007, held in Hanoi, Vietnam, in December 2007. The 41 revised full papers, 15 revised short papers, and extended abstracts of 10 poster papers presented together with three keynote and three invited papers were carefully reviewed and selected from a total of 154 submissions. The papers are organized in topical sections.

Second in a series of publications from the Institute of Medicine's Quality of Health Care in America project Today's health care providers have more research findings and more technology available to them than ever before. Yet recent reports have raised serious doubts about the quality of health care in America. Crossing the Quality Chasm makes an urgent call for fundamental change to close the quality gap. This book recommends a sweeping redesign of the American health care system and provides overarching principles for specific direction for policymakers, health care leaders, clinicians, regulators, purchasers, and others. In this comprehensive volume the committee offers: A set of performance expectations for the 21st century health care system. A set of 10 new rules to guide patient-clinician relationships. A suggested organizing framework to better align the incentives inherent in payment and accountability with improvements in quality. Key steps to promote evidence-based practice and strengthen clinical information systems. Analyzing health care organizations as complex systems, Crossing the Quality Chasm also documents the causes of the quality gap, identifies current practices that impede

quality care, and explores how systems approaches can be used to implement change.

The God Delusion caused a sensation when it was published in 2006. Within weeks it became the most hotly debated topic, with Dawkins himself branded as either saint or sinner for presenting his hard-hitting, impassioned rebuttal of religion of all types. His argument could hardly be more topical. While Europe is becoming increasingly secularized, the rise of religious fundamentalism, whether in the Middle East or Middle America, is dramatically and dangerously dividing opinion around the world. In America, and elsewhere, a vigorous dispute between 'intelligent design' and Darwinism is seriously undermining and restricting the teaching of science. In many countries religious dogma from medieval times still serves to abuse basic human rights such as women's and gay rights. And all from a belief in a God whose existence lacks evidence of any kind. Dawkins attacks God in all his forms. He eviscerates the major arguments for religion and demonstrates the supreme improbability of a supreme being. He shows how religion fuels war, foments bigotry and

abuses children. The God Delusion is a brilliantly argued, fascinating polemic that will be required reading for anyone interested in this most emotional and important subject.

A Bible student reference A New Testament prophecy of a falling away from truth into apostasy and lawlessness, in the final generation before Jesus Christ returns in glory, is being fulfilled now and is shortly to end. Yet Christianity has overwhelmingly moved so far from its first century roots that it could not even recognise this – or that Christ’s return is therefore now almost upon us! How and why this is the case is here explained thoroughly and logically with many examples directly from the word of God. In God’s saving plan for the world, everyone must in time make a free will choice to become part of the ‘Israel of God’ in order to access eternal life in the kingdom of God. The route to take is the “strait and narrow” way (Mat 7:13-14) that very few have so far found, and it involves the biblical new and old covenants which both apply to this Israel. Embark on this voyage only if you are willing to: be challenged about some basic Christian preconceptions, be a serious open-minded Bible student, and trust what the Bible teaches - but remember that time is short. “What the Bible has taught me I see as both vital and urgent for our eternal salvation; yet I know of no church or individual theologian who teaches what this book deals with in any substantive way” “Be prepared for major challenges to your understanding just as God has challenged me.” “In the epistles, Paul refers to two Israels whom he calls Israel after the flesh (I Cor 10:18) and the Israel of God (Gal 6:16); I focus mainly on the latter (but I also explain an unexpected but critically important connection between them)” “Dependent on the teaching, nearly all Christian denominations either teach nothing at all on it or almost the opposite of what Scripture repeatedly showed me. Looking back, I find this absolutely staggering!” “Very few [Christians] understand that the new covenant also only applies to Israel (as I will clearly show).” “I no longer believe that the NT [New Testament] can be fully understood without this extra Israel dimension” “Had I felt I could deliver this in a more light-hearted way I would have done so, but its implications are too awesome and fundamental to our eternal life prospects for that”

Get up-to-speed with some of the biggest challenges facing New Zealand with this bundle of high-profile BWB Texts. These four works are combined into one easy-to-read e-book, available direct and DRM-free from our website or from international e-book retailers. Seventy-five years after Labour’s social security reforms of the 1930s, Paul Dalziel and Caroline Saunders argue in Wellbeing Economics it is time for a major shift in New Zealand’s economic perspective. In Growing Apart, Shamubeel Eaqub highlights the changing economic fortunes of people in different parts of New Zealand – the growing gaps between our regions. Max Rashbrooke’s The Inequality Debate provides a succinct introduction to income inequality in New Zealand using the latest data. The meaning of The Piketty Phenomenon for New Zealand is explored by a diverse range of economists and commentators addressing the relevance of Thomas Piketty’s ‘Capital in the Twenty-First Century’. BWB Texts are short books on big subjects by great New Zealand writers. Commissioned as short digital-first works, BWB Texts unlock diverse stories, insights and analysis from the best of our past, present and future New Zealand writing.

These proceedings cover the most recent advances on histamine research from basic science to clinical medicine. Histamine is an endogenous compound that is synthesized, stored, and released primarily by mast cells and after release exerts profound effects on many tissues and organs. It is one of the cellular mediators of the immediate hypersensitivity reaction and the acute inflammatory responses, as well as primary stimulant of gastric acid secretion. A central neurotransmitter role for histamine has been also established. Histamine research has been very dynamic since its discovery in 1910. Among recent important advances are: Generation of Histamine H1, H2, H3 receptors and histidine decarboxylase (HDC) knockout mice; Clarification of the constitutive activity of the H1, H2 and H3 receptors; Characterisation of H3 receptor isoforms with distinct signaling properties; and Characterisation and cloning of the H4 receptor.

In 1997, the U.S. Environmental Protection Agency (EPA) established regulatory standards to address health risks posed by inhaling tiny particles from smoke, vehicle exhaust, and other sources. At the same time, Congress and the EPA began a multimillion dollar research effort to better understand the sources of these airborne particles, the levels of exposure to people, and the ways that these particles cause disease. To provide independent guidance to the EPA, Congress asked the National Research Council to study the relevant issues. The result was a series of four reports on the particulate-matter research program. The first two books offered a conceptual framework for a national research program, identified the 10 most critical research needs, and described the recommended timing and estimated costs of such research. The third volume began the task of assessing initial progress made in implementing the research program. This, the fourth and final volume, gauged research progress made over a 5-year period on each of the 10 research topics. The National Research Council concludes that particulate matter research has led to a better understanding of the health effects caused by tiny airborne particles. However, the EPA, in concert with other agencies, should continue research to reduce further uncertainties and inform long-term decisions.
