This volume contains twenty-three contributions delivered at the CEFL's second international conference which took place in Utrecht in December 2004. The interventions written by both experienced family experts as well as young researchers cover those fields of family law that are

closely related to the activities of the CEFL: (1) divorce and maintenance between former spouses, (2) parental responsibilities, (3) informal long-term relationships and (4) the revised Brussels II Regulation. Furthermore, the opening two contributions deal not only with essential aspects of the harmonisation process of family law in Europe but also with the CEFL's working method.

Why doesn't your home page appear on the first page of search results, even when you use your own name? How do other web pages always appear at the top? What creates the most powerful rankings? And how? The first book ever about the science of web page ranking, Google's PageRank and Beyond supplies the answers to these and other questions and

The book serves two very different audiences: the curious science reader and the technical/computational reader. The chapters build in mathematical sophistication, so that the first few are accessible to the general academic reader. While other chapters are much more mathematical in nature, each one contains something for both audiences. For example, the authors include entertaining asides such as how search engines make money and how the Great Firewall of China influences research. The book includes an extensive background chapter designed to help readers learn more about the mathematics of search engines. It contains several MATLAB codes and links to sample web data sets. The philosophy throughout is to encourage readers to experiment with the ideas and algorithms in the book. Any business seriously interested in improving its rankings in the major search engines will benefit from the clear examples, sample code, and list of resources provided. Idiopathic sudden sensorineural hearing loss (ISSHL) is defined as an abrupt hearing loss of unexplained aetiology. Diagnosis is based on the clinical presentation, a sensorineural defect detected with tuning fork tests and on hearing tests. ISSHL should be treated as a medical emergency and an urgent consultation of an otolaryngologist is indicated. Spontaneous recovery is common in mild cases. There is research evidence, albeit limited, to support the early and short term use of corticosteroids in patients with no contraindications to steroid treatment.

Since the beginning of mankind on Earth, if the "busyness" process was successful, then some form of benefit sustained it. The fundamentals are obvious: get the right inputs (materials, labor, money, and ideas); transform them into highly demanded, quality outputs; and make it available in time to the end consumer. Illustrating how operations relate to the rest of the organization, Production and Operations Management Systems provides an understanding of the production and operations management (P/OM) functions as well as the processes of goods and service producers. The modular character of the text permits many different journeys through the materials. If you like to start with supply chain management (Chapter 9) and then move on to inventory management (Chapter 5) and then quality management (Chapter 8), you can do so in that order. However, if your focus is product line

stability and quick response time to competition, you may prefer to begin with project management (Chapter 7) to reflect the continuous project mode required for fast redesign rapid response. Slides, lectures, Excel worksheets, and solutions to short and extended problem sets are available on the Downloads / Updates tabs. The project management component of P/OM is no longer an auxiliary aspect of the field. The entire system has to be viewed and understood. The book helps students develop a sense of managerial competence in making decisions in the design, planning, operation, and control of manufacturing, production, and operations systems through examples and case studies. The text uses analytical techniques when necessary to develop critical thinking and to sharpen decision-making skills. It makes production and operations management (P/OM) interesting, even exciting, to those who are embarking on a career that involves business of any kind.

This book is written for any clinician who encounters substance abuse in a patient and wonders what to do. Experts from a cross-section of specialties and health professions provide up-to-date, evidence-based guidance on how non-expert clinicians can recognize, understand, and approach the management of substance abuse in their patients. They detail the range of treatments available and whether and how they work. The central importance of using a carefully selected multimodal

approach that is tailored to the individual patient is emphasized throughout and illustrated in case scenarios from actual clinical practice.

Messages, Signs, and Meanings can be used directly in introductory courses in semiotics, communications, media, or culture studies. Additionally, it can be used as a complementary or supplementary text in courses dealing with cognate areas of investigation (psychology, mythology, education, literary studies, anthropology, linguistics). The text builds upon what readers already know intuitively about signs, and then leads them to think critically about the world in which they live - a world saturated with images of all kinds that a basic knowledge of semiotics can help filter and deconstruct. The text also provides opportunities for readers to do "hands-on" semiotics through the exercises and questions for discussion that accompany each chapter.

Biographical sketches of the major figures in the field are also included, as is a convenient glossary of technical terms. The overall plan of the book is to illustrate how message-making and meaning-making can be studied from the specific vantage point of the discipline of semiotics. This third edition also includes updated discussions of information technology throughout,

focusing especially on how meanings are now negotiated through such channels as websites, chat rooms, and instant messages.
