4-2 Writing Equations in Slope-Intercept Form
Consider as an example the reaction between
one methane molecule (CH_4) and two diatomic
oxygen molecules (O_2) to produce one carbon
dioxide molecule (CO_2) and two water
molecules (H_2O). The chemical equation
representing this process is provided in the
upper half of Figure $\{\{1\}\}$, with
space-filling molecular models shown in the
lower half of the figure.

Multiply the amount of hours worked by the rate of pay and then add on the bonus. This can be shown by writing a formula. $\text{\textbackslash} [\text{\textbackslash} \textit{Pay}] = \text{\textbackslash} \textit{amount of hours worked} \text{\textbackslash} \textit{times} \text{\textbackslash} \textit{rate of pay} \dots$

Creating formula - Algebraic formulae - Edexcel - GCSE ...

The simplification calculator allows you to take a simple or complex expression and simplify and reduce the expression to it's simplest form. The calculator works for both numbers and expressions containing variables.

Simplify Calculator - Mathway

Enter the point and slope that you want to find the equation for into the editor. The equation point slope calculator will find an equation in either slope intercept form or point slope form when given a point and a slope. The calculator also has the ability to provide step by step solutions. Step 2: Click the blue arrow to submit.

Find the Equation with a Point and Slope

The equation, $y = mx + b$, is in slope-intercept form for the equation of a line. When an equation is in this form, the slope of the line is given by m and the y -intercept is located at b . For example, a line with the equation $y = 2x + 4$ has a slope of 2 and a y -intercept of 4. The following diagram shows an equation in slope-intercept form.
