

Antonio Pisaniello Mani In Pasta

A global celebration of the iconic restaurant dishes that defined the course of culinary history over the past 300 years Today's food-lovers often travel the globe to enjoy the food of acclaimed chefs. Yet the tradition of seeking out unforgettable dining experiences goes back centuries, and this gorgeous book reveals the closely held secrets behind the world's most iconic recipes - dishes that put restaurants on the map, from 19thcentury fine dining and popular classics, to today's most innovative kitchens, both high-end and casual. Curated by experts and organized chronologically, it's both a landmark cookbook and a fascinating cultural history of dining out. The narrative texts are by Christine Muhlke and the Foreword is by Mitchell Davis.

This book brings together a group of international specialists to explore the current state of the art and future potential for encouraging, developing and implementing smart and sustainable built environment strategies. It covers a broad spectrum of issues, ranging from technological advancement, through the assessment of past experiences, to communication and education requirements and future strategies. provides a snapshot of current methods and technologies for developing smart and sustainable built environment strategies over 30 fully refereed chapters from international experts addresses the particular requirements and problems of difference areas and climatic regions

According to well-established views, language has several subsystems where each subsystem (e.g. syntax, morphology, phonology) operates on the basis of hierarchically organised units. When it comes to the graphematic structure of words, however, the received view appears to be that linear structure is all that matters. Contrary to this view, a sub-field of writing systems research emerges that can be called non-linear or supra-segmental graphematics. Drawing on parallels with supra-segmental phonology, supra-segmental graphematics claims the existence and relevance of cross-linguistically available building blocks, such as the syllable and the foot, in alphabetical writing systems, such as the writing systems of German and English. This book explores the graphematic hierarchy with a special focus on the unit foot. Structural, experimental and databased evidence is presented in favour of this approach. In addition, analyses within the optimality theory framework are offered. This work shows that the supra-segmental graphematic approaches are superior to linear ones with respect to explanatory strength and even preciseness of the description. It is thus interesting for academics concerned with writing systems and orthography teaching.

Narrative medicine emerged in response to a commodified health care system that places corporate and bureaucratic concerns over the needs of the patient. This book provides an introduction to the principles of narrative medicine and guidance for implementing narrative methods.

Italians to America is the first indexed reference work devoted to Italian immigrants to the United States. This series contains passenger list information in chronological order on the first major wave of Italian migration during the last two decades of the 19th century, as well as the beginning of the 20th century. As with the highly regarded companion series on German immigrants, Italians to America presents the passenger lists in chronological order, including information on each person's age, sex, occupation, village of origin, and destination, plus the name of the ship, the port of embarkation, and the date of arrival. Each volume also contains an introduction on the history of Italian migration to the U.S. and a full name index, greatly simplifying the researcher's job.

Transcatheter Valve Repair discusses all aspects related to percutaneous and established valve repair methods. The book is divided into few major sections covering all four valves and other topics. Each section contains several chapters discussing everything related to that valve. Beginning with the pulmonary valve, since it was the first valve to be tackled in the catheterization laboratory, and then moving to the aortic, then the mitral and then finally end with the tricuspid valve. 1.5M US citizens alone have some degree of aortic valve stenosis, with half (750K) requiring aortic valve replacement. Aortic valve replacement, on the whole, is performed by surgeons, requiring bypass machines and technicians, as well as the usual operating team. The operation is expensive and occupies a considerable amount of operating room time. Mostly, the aortic valve is calcified and the usual option available to patients is valve replacement with a variety of choices, ranging from porcine valves to synthetic, for which there are many manufacturers. It should be noted that the aortic valve is the most problematic of valves. Percutaneous procedures are the answer. The bottom line is that given the growing elderly population, many more patients will require valve repair, thus increasing health care costs with not only surgical operations but also hospitalisation. Percutanous valve repair, whilst requiring a cath lab team, does not involve bypass machines nor extended hospitalisation. Like percutaneous transluminal coronary artery interventions (PTCA) has replaced coronary artery bypass grafts (once the golden standard), and now stenting having replaced PTCA and its balloons. We now see drug eluting stents replacing ordinary stents (though at a much higher cost. There will be a huge movement toward percutanous valve repair, which should presumably cut costs but also morbidity and mortality.

Chronic total occlusions (CTO) are common, and found in approximately one third of patients with significant coronary artery disease who undergo angiography. Over the past 20 years, CTO lesions have represented the most difficult anatomy for treatment – with lower success rates and higher complication rates. Chronic Total Occlusions provides interventionalists insight into the world of CTOs with introductory chapters that describe the pathology and indications of CTOs along with a review of clinical trials. Imaging modalities including CT angiography, magnetic navigation wire, and IVUS guided recanalization of CTO are also introduced, together with information on new wires technology and devices for CTOs. With numerous illustrations of these devices, technologies, and strategies to improve the CTO success rate, this clinical guide, headed up by Ron Waksman, will prove to be the ideal companion for interventional cardiologists and cardiac surgeons who are required to perform angioplasty and coronary stenting.

Psychology and Climate Change: Human Perceptions, Impacts, and Responses organizes and summarizes recent psychological research that relates to the issue of climate change. The book covers topics such as how people perceive and respond to climate change, how people understand and communicate about the issue, how it impacts individuals and communities, particularly vulnerable communities, and how individuals and communities can best prepare for and mitigate negative climate change impacts. It addresses the topic at multiple scales, from individuals to close social networks and communities. Further, it considers the role of social diversity in shaping vulnerability and reactions to climate change. Psychology and Climate Change describes the implications of psychological processes such as perceptions and motivations (e.g., risk perception, motivated cognition, denial), emotional responses, group identities, mental health and well-being, sense of place, and behavior (mitigation and adaptation). The book strives to engage diverse stakeholders, from multiple disciplines in addition to psychology, and at every level of decision making – individual, community, national, and international, to understand the ways in which human capabilities and tendencies can and should shape policy and action to address the urgent and very real issue of climate change. Examines the role of knowledge, norms, experience, and social context in climate change awareness and action Considers the role of identity threat, identity-based motivation, and belonging Presents a conceptual framework for classifying individual and household behavior Develops a model to explain environmentally sustainable behavior Draws on what we know about participation in collective action Describes ways to improve the effectiveness of climate change communication efforts Discusses the difference between acute climate change events and slowly-emerging changes on our mental health Addresses psychological stress and injury related to global climate change from an intersectional justice perspective Promotes individual and community resilience

This book mirrors the progress that has been made in Endoscopic surgery in the past 15 years. It is an unparalleled reference work on endoscopic surgical techniques in children. It contains 111 chapters, starting with 8 basic chapters, to be followed by 20 chapters on thoracoscopic procedures, 41 chapters on endoscopic surgical gastrointestinal, hepatic, pancreatic and splenic procedures, and 30 chapters on endoscopic surgical urology and adrenalectomy. Further topics are covered and the book also deals with endoscopic surgery in oncological conditions and in trauma as well. This practical book is illustrated with about 1000 drawings and color photographs.

This book, originally published 1915, is a product of the new science of geography. The old geography strove primarily to produce exact maps of the physical features of the earth's surface. The new goes farther. It adds to the physical maps an almost innumerable series showing the distribution of plants, animals, and man and of every phase of the life of these organisms. It does this, not as an end in itself, but for the purpose of comparing the physical and organic maps and thus determining how far vital phenomena depend upon geographic environment. Book jacket.

Winner, Euler Book Prize, awarded by the Mathematical Association of America. With over 200 full color photographs, this non-traditional, tactile introduction to non-Euclidean geometries also covers early development of geometry and connections between geometry, art, nature, and sciences. For the crafter or would-be crafter, there are detailed instructions for how to crochet various geometric models and how to use them in explorations. New to the 2nd Edition: Daina Taimina discusses her own adventures with the hyperbolic planes as well as the experiences of some of her readers. Includes recent applications of hyperbolic geometry such as medicine, architecture, fashion & quantum computing.

The thirty papers in this 1986 volume review the scientific knowledge of the nature of flint and chert at this time. These papers were presented at a 1983 interdisciplinary and international conference on flint and other cherts. Each contribution has been meticulously assessed and edited prior to publication. This collection is principally concerned with the geology and geochemistry of flint in European chert. Topics include the origin of flint; scanning electron microscopy of surface textures; and the behaviour of flint under periglacial conditions. There is a companion volume, edited by G. de G. Sieveking and M. B. Hart, on the archaeological uses of flint.

The Hebrew Republic of Carlo Sigonio was one of the first works dedicated to the religious and political institutions of the ancient Hebrew state, and it was the first book to frame this kind of research under the Latin title respublica Hebraeorum. Soon after its original publication in Bologna in 1582, it was suppressed by the Church because of its strenuous antimonarchism, and it reappeared in Italy only in 1754. In the rest of Europe, however, it enjoyed great popularity and profoundly influenced such thinkers as Grotius, Althusius, and Cunaeus. This edition is the first modern English-language translation from the Latin. Guido Bartolucci is a scholar of early modern history and teaches at the universities of Bologna and Calabria. He has written in both English and Italian on the discovery of Jewish political thought in early modern Europe, including La repubblica ebraica di Carlo Sigonio: Modelli politici dell'ela moderna (2007). Peter Wyetzner holds a Ph.D. in ancient history from the University of at Berkeley.

Asian cities are particularly vulnerable to risks associated with natural disasters. While they are exposed to various types of natural hazards, flooding and other water-related disasters pose particularly significant risks and undermine long-term economic growth, especially in coastal cities. Managing such natural disaster risks is an essential component of urban policies in fast-growing Southeast Asian cities, especially as the impacts of climate change worsen. In addition to providing a framework for assessing disaster risk management policies in cities, this report also presents the results of assessment and locally tailored policy recommendations in five cities of different institutional, geographic, socio-economic and environmental contexts in Southeast Asia. They include Bandung (Indonesia), Bangkok (Thailand), Cebu (Philippines), Hai Phong (Viet Nam) and Iskandar (Malaysia). The study highlights that Southeast Asian cities are largely underprepared for natural disaster risks. Through an assessment of disaster risk management (DRM) policies at national and subnational levels, the study aims to enhance urban resilience by: i) identifying policy challenges related to DRM ; ii) assessing the impacts of current DRM policy practices; and iii) proposing more efficient and effective policy options to enhance urban resilience.

The ultimate guide to the world's most popular hot beverage - from Ferran Adrià's elBullifoundation and Lavazza In this all-encompassing encyclopedia, experts at the elBullifoundation, working alongside the world-leading coffee brand Lavazza, provide the answers to these questions and many more. This comprehensive and fascinating volume is perfectly positioned for culinary professionals, coffee aficionados, and all those who want to explore the world behind this vital element of our everyday lives. Readers will discover the history, consumption practices, production techniques, and myriad varieties of coffee, and gain an understanding of the coffee industry as a whole. This is the perfect companion for those who want to approach the worlds of coffee and gastronomy from a practical and intellectual point of view, either as a culinary professional or a curious coffee enthusiast.

First published in 1991. Investigative Pathology of Odontogenic Cysts presents a unique and succinct review of the pathology of odontogenic cysts. The book emphasizes investigative pathology of odontogenic cysts and uses numerous illustrations and tables to reinforce and summarize discussions presented in the text. The book's most important aspect is its attempt to bring together new information regarding odontogenesis and the pathogenesis of odontogenic cysts. Oral biologists and pathologists working with dental tissues will find this book an important reference resource.

This book arises from a three-year comparative research program concerning co-operative enterprises in Australia and Italy. The book explores the historical development, legal framework and the peak organisations of co-operatives in the two countries. Specific comparative chapters focus on consumer, credit, and worker-producer co-operatives. The book deepens the analysis of co-operatives by containing chapters that examine specific theoretical and empirical issues such as the theory of co-operative firms as collective entrepreneurial action. Monographic chapters include more in depth analysis of specific typologies of co-operatives, such as social and community oriented co-operatives, some of which were created to contrast organized crime in Southern Italy. The book concludes with an assessment of the implications of the project for public policy.

This book contains the papers on Soviet foreign policy, concentrating on the constants that form the bedrock of Soviet policy and the Soviet variant of a policy of detente. It deals with the cultural-historical background that lies behind the political outlooks of the United States and Russia.

English is increasingly becoming the world's lingua franca. If we are not native speakers of one of the many varieties of English, then we may be students of English, or use English regularly for academic or business purposes. The English Language series, which is international in focus, aims to synthesize the wealth of existing linguistic research both on and in English. Each volume in the series is designed to present these findings in an accessible, enlightening and entertaining way not only to students of English linguistics but to learners and users of English across the globe. The English Writing System describes how writing is not simply ancillary to other aspects of language but vitally important to almost everything we do, from signing our wills to sending a text message. This book discusses the mechanics of the writing systems of English; the different ways people process words on a page and the mistakes they can make; how children and second language learners acquire these systems; the historical development of the language and the progress of writing technology; in short, the effectiveness of the writing systems of English. Combining an academic perspective from linguistics and psychology with insights into everyday spelling mistakes, The English Writing System will interest students and teachers of linguistics, literature, the English language, psychology and education.

The demand for academic coursework and corporate training programs using the Internet and computer-mediated communication networks increases daily. The development and implementation of these new programs requires that traditional teaching techniques and course work be significantly reworked. This handbook consists of 20 chapters authored by experts in the field of teaching in the online environment to adult students enrolled in graduate university degree programs, corporate training programs, and continuing education courses. The book is organized to first lay a conceptual and theoretical foundation for implementing any online learning program. Topics such as psychological and group dynamics, ethical issues, and curriculum design are covered in this section. Following the establishment of this essential framework are separate sections devoted to the practical issues specific to developing a program in either an academic or corporate environment. Whether building an online learning program from the ground up or making adjustments to improve the effectiveness of an existing program, this book is an invaluable resource.--From Amazon.

Adaptive Thermal Comfort: Foundations and Analysis

Antonio Pisaniello. Mani in pasta

comparative analysis and theoretical insights

A Novel

Annuario militare del regno d'Italia

Illocution, Modality, Attitude, Information Patterning and Speech Annotation

There has been widespread dissatisfaction with accepted models for predicting the conditions that people will find thermally comfortable in buildings. These models require knowledge about clothing and activity, but can give little guidance on how to quantify thermal comfort. This has forced designers to make assumptions about people's future behaviour based on very little information and, as a result, encouraged static design indoor temperatures. This book is the second in a three volume set covering all aspects of Adaptive Thermal Comfort. It narrates the development of the adaptive approach to thermal comfort from its early beginnings in the 1960s. It discusses recent work in the field and suggests ways in which it can be developed and modelled. Such models can be used to set dynamic, individualized thermal comfort which will help overcome the problems inherited from the past. The second part of the volume engages with the practical and theoretical problems encountered in field studies and in their statistical analysis, providing guidance towards their resolution. The third part may be drawn from such studies.

From Rabelais's celebration of wine to Proust's madeleine and Virginia Woolf's boeuf en daube in To the Lighthouse, food has figured prominently in world literature. But perhaps nowhere has it played such a vital role as in the Italian novel. In a book flowing with recipes, ingredients, fragrances, country gardens, kitchens, dinner etiquette, and even hunger, Gian-Paolo Biasin examines food images in the modern Italian novel so as to unravel their function and meaning. As a sign for cultural values and social and economic change, food becomes a key to appreciating the textual richness of works such as Lampedusa's The Leopard, Manzoni's The Betrothed, Primo Levi's Survival in Auschwitz, and Calvino's Under the Jaguar Sun. The importance of the culinary sign in fiction, argues Biasin, is tied to the relationship between food and language while creating a sense of materiality. Food contributes powerfully to the reality of a text by making a fictional setting seem credible and coherent: a Lombard peasant eats polenta in The Betrothed, whereas a Sicilian macaroni timbale at a dinner in The Leopard. Similarly, Biasin shows how food is used by writers to connote the psychological traits of a character, to construct a story by making the protagonists meet during a meal, and even to call attention to the fictional nature of the metanarrative description. Drawing from anthropology, psychoanalysis, sociology, science, and philosophy, the author gives special attention to the metaphoric and symbolic meanings of food. Throughout he blends material culture with observations on them to enlighten the reader who enjoys the pleasures of the text as much as those of the palate. Originally published in 1993. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage of one of the greatest university presses in the world without increasing the overall price of our popular paperbacks.

In the near future the appearance and spatial organization of urban and rural landscapes will be strongly influenced by the generation of renewable energy. One of the critical tasks will be the re-integration of these sustainable energy landscapes into the existing landscape. This book discusses the value of people value and want to preserve-in a socially fair, environmental

TRENDS IN LINGUISTICS is a series of books that open new perspectives in our understanding of language. The series publishes state-of-the-art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by building bridges to neighbouring fields such as neuroscience and cognitive science. TRENDS IN LINGUISTICS considers itself a forum for cutting-edge research based on solid empirical data on language in its various manifestations, including sign languages. It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language. TRENDS IN LINGUISTICS publishes monographs and outstanding dissertations as well as edited volumes, which provide the opportunity to address controversial topics from different empirical and theoretical viewpoints. High quality standards are ensured through anonymous reviewing.

The global antimicrobial resistance crisis has been the driver of several international strategies on antimicrobial stewardship. Despite their good intentions, such broad strategies are only slowly being implemented in real life. Antimicrobial resistance bacteria flow among humans and animals, and actions for fighting the problem must consider both sectors. Antimicrobial usage is one of the potential drivers for antimicrobial resistance. The usage of antibiotics concerning companion and food animals and antimicrobials is undoubtedly beneficial for the prevention of diseases and the improvement of livestock performance. Unfortunately, in veterinary medicine, which is challenged by a shortage of experts in key disciplines related to antimicrobial stewardship, there are few antimicrobial treatment guidelines and diagnostic tests are inferior compared to human microbiology, without providing enough valuable information, which makes it difficult to identify by whom, when, and how the antimicrobial products are used. The main aspects of antimicrobial resistance monitoring remain unsolved in both companion and food animals, the use of appropriate methods for collection of information at the animal and farm levels, and the choice of metrics of measurement of antimicrobial resistance and animal populations at risk.

The Strega Prize-winning author of The Girl with a Leica delivers a novel that hinges on one of the bloodiest World War II battles and those who fought it. In this highly original novel, Janeczek retells the four-month-long Battle of Monte Cassino from the point of view of the Maori, Gurkha, Polish, North African, small-town American and other Allied foot soldiers who fought and died under German fire near that 6th century Benedictine abbey. Twined through the battle is another story, a memory of the drowned and the saved in Janeczek's own family in wartime Eastern Europe, where Jews who did not go to Nazi death camps went to Soviet gulag camps, and sometimes survived, and even went on to fight at Monte Cassino. A powerful reflection on all the ways that rights can be taken from us. "Helena Janeczek's novel is this: a tattoo etched on the skin, and not painlessly. A vast design that brings together threads from all the various lives that converged in that legendary battle. The beauty of her tale lies in its structure, the way opposites converge: the chaos of battle and the silence of the defeated, ordinariness and the heroism of the powerless, carefully guarded memory and impetuous youth, the past perpetually intertwined with the present." —Roberto Saviano, author of Gomorrah

Il presente volume raccoglie i contributi scientifici presentati al convegno internazionale Arte e committenza nel Lazio nell'età di Cesare Baronio, organizzato in occasione del IV centenario della morte del cardinale sorano (1538-1607), storico della Chiesa e autore degli Annales Ecclesiastici. I temi affrontati spaziano dall'archeologia cristiana all'architettura, dalla storia dell'arte all'iconografia, seguendo l'ampio orizzonte di argomenti influenzati dalla produzione storica e letteraria di Baronio. Emerge così dalla lettura del libro una ricca trama di relazioni culturali che, sulle orme del cardinale oratoriano, ha decisamente contrassegnato la committenza artistica non solo del Lazio dei papi, ma in generale del centro Italia, contribuendo a ridisegnare la politica delle arti nell'età della Controriforma. Patrizia Tosini insegna Storia dell'arte moderna all'Università di Cassino. È autrice di numerosi saggi sulla produzione artistica nell'età della Controriforma e sulla pittura della seconda metà del Cinquecento a Roma e nel Lazio. Tra i volumi recentemente pubblicati, una monografia sul pittore Girolamo Muziano (2008). Per la Gangemi Editore ha curato con Natalia Gozzano il volume La cappella Contarelli in San Luigi dei Francesi. Arte e committenza nella Roma di Caravaggio (2005).

An Assessment of Disaster Risk Management Policies in Southeast Asia

The Hebrew Republic

From Basic Concept to Clinical Applications

Applications in Interventional Cardiology

Proceedings of the Fourth International Flint Symposium Held at Brighton Polytechnic 10-15 April 1983

Pragmatics and Prosody

Structural heart disease interventions are a diverse group of novel treatments that have evolved from a small number of procedures to an impressive array of new approaches to diseases that have been traditionally managed by surgery and medical therapy. This book has been prepared for use by physicians and non-physicians who have an interest in SHD interventions and desire a practical, comprehensive, and clinical summary of established and emerging percutaneous interventions. The chapters are authored by recognized experts from around the world. There are five major sections including: 1) Core Knowledge in SHD Intervention 2) Specialized Skills for the Interventionalist 3) Closure of Congenital and Acquired Defects in Adults 4) Transcatheter Therapy for Valvular Disease 5) Specialized Procedures Features

Include: Extensive images to present anatomical complexities and diversity including some interactive 3-D graphics Presentation of transcatheter mitral valve repair Chapter on how to set up & credential a SHD program This book provides a comprehensive, up-to-date summary of drug-coated balloon (DCB) technology and the role of DCBs in the treatment of coronary and peripheral arterial disease. In addition to clear explanation of how DCBs works, readers will find an enlightening analysis of the mistakes and successes of the past decade and the emergence of the latest delivery systems, which combine a more deliverable device with much improved drug delivery to the vessel wall. The full range of current applications of DCBs are reviewed in detail, drawing on the latest scientific evidence. Due attention is paid to newer devices, with provision of technical insights and documentation of the available clinical data. Ongoing research projects, remaining technical challenges, likely future directions, and reimbursement issues are also carefully considered. This book will be a useful tool for any interventional cardiologist, interventional radiologist, or vascular surgeon who wishes to acquire a deep knowledge of this technology and its application in both coronary and peripheral interventions.

This book focuses on the coronary bioresorbable scaffold, a new interventional treatment for coronary artery disease, differentiated from a permanent metallic stent. The book provides an overview of the technology including non-clinical studies and clinical evidences in order to help clinicians understand the appropriate application of the technology and the optimal techniques of implantation. It covers the basics of bioresorbable scaffolds; bench test results; preclinical studies; clinical evidences; and tips and tricks of implantation.

This volume of Interventional Cardiology Clinics will have two parts. Part I will cover Transcatheter Tricuspid Valve Intervention and be edited by Dr. Azeem Latib. Part II will focus on Interventional Therapy for Pulmonary Embolism, with editorial direction from Dr. Jay Giri.

Topics covered in Part I include: Interventional Imaging of the Tricuspid Valve; Percutaneous Tricuspid Annuloplasty; Tricuspid Spacers; Caval valve implantation; and Transcatheter Tricuspid Valve Replacement. Articles in Part II include, but are not limited to: Systemic Thrombolysis for Pulmonary Embolism; Catheter-Based Embolectomy for Acute Pulmonary Embolism; Mechanical Hemodynamic Support for Acute Pulmonary Embolism; Caval Filters: Current and Future Concepts; and Balloon Pulmonary Angioplasty for Chronic

Thromboembolic Pulmonary Hypertension.

Antonio Pisaniello. Mani in pastaSignature Dishes That MatterPhaidon Press

Cardiovascular disease (CVD), once thought to be confined primarily to industrialized nations, has emerged as a major health threat in developing countries. Cardiovascular disease now accounts for nearly 30 percent of deaths in low and middle income countries each year, and is accompanied by significant economic repercussions. Yet most governments, global health institutions, and development agencies have largely overlooked CVD as they have invested in health in developing countries. Recognizing the gap between the compelling evidence of the global CVD burden and the investment needed to prevent and control CVD, the National Heart, Lung, and Blood Institute (NHLBI) turned to the IOM for advice on how to catalyze change. In this report, the IOM recommends that the NHLBI, development agencies, nongovernmental organizations, and governments work toward two essential goals: creating environments that promote heart healthy lifestyle choices and help reduce the risk of chronic diseases, and building public health infrastructure and health systems with the capacity to implement programs that will effectively detect and reduce risk and manage CVD. To meet these goals, the IOM recommends several steps, including improving cooperation and collaboration; implementing effective and feasible strategies; and informing efforts through research and health surveillance. Without better efforts to promote cardiovascular health, global health as a whole will be undermined.
