

Citt D

On a far future Earth, mankind's achievements are immense: artificially intelligent robots, genetically uplifted animals, interplanetary travel, genetic modification of the human form itself. But nothing comes without a cost. Humanity is tired, its vigour all but gone. Society is breaking down into smaller communities, dispersing into the countryside and abandoning the great cities of the world. As the human race dwindles and declines, which of its great creations will inherit the Earth? And which will claim the stars?

This edited collection will examine the way in which cities are imagined, experienced and shaped by those who reside within them, those who manage or govern them, and those who, as visitor, tourist or traveller, pass through them. Attention will be paid to the influence that these various inhabitants have on city life and living and the dialectic that exists between their sometimes collective and sometimes divergent, perceptions and uses of city space. In conjunction with this, the collection will explore the ways in which local culture and cultural policy are used by public and private interests as the framework for changing the image and amenity of the city in order to raise its profile and attract tourists. The book contributes to discussions of the increasingly high profile place that cultural programs have in urban regeneration initiatives and explore the tensions, conflicts and negotiations that emerge in urban spaces as a result of policy and culture coming together. Papers will be sought from researchers around the world with a view to examining the nexus between tourism, leisure and cultural programming from a number of perspectives and with reference to a range of international case studies. This book was published as a special issue of the Journal of Policy Research in Tourism, Leisure and Events.

Based on extensive field research in Turkey, *Istanbul, City of the Fearless* explores social movements and the broader practices of civil society in Istanbul in the critical years before and after the 1980 military coup, the defining event in the neoliberal reengineering of the city. Bringing together developments in anthropology, urban studies, cultural geography, and social theory, Christopher Houston offers new insights into the meaning and study of urban violence, military rule, activism and spatial tactics, relations between political factions and ideologies, and political memory and commemoration. This book is both a social history and an anthropological study, investigating how activist practices and the coup not only contributed to the globalization of Istanbul beginning in the 1980s but also exerted their force and influence into the future.

The fight for the future of the city street between pedestrians, street railways, and promoters of the automobile between 1915 and 1930. Before the advent of the automobile, users of city streets were diverse and included children at play and pedestrians at large. By 1930, most streets were primarily a motor thoroughfares where children did not belong and where pedestrians were condemned as "jaywalkers." In *Fighting Traffic*, Peter Norton argues that to accommodate automobiles, the American city required not only a physical change but also a social one: before the city could be reconstructed for the sake of motorists, its streets had to be socially reconstructed as places where motorists belonged. It was not an evolution, he writes, but a bloody and sometimes violent revolution. Norton describes how street users struggled to define and redefine what streets were for. He examines developments in the crucial transitional years from the 1910s to the 1930s, uncovering a broad anti-automobile campaign that reviled motorists as "road hogs" or "speed demons" and cars as "juggernauts" or "death cars." He considers the perspectives of all users—pedestrians, police (who had to become "traffic cops"), street railways, downtown businesses, traffic engineers (who often saw cars as the problem, not the solution), and automobile promoters. He finds that pedestrians and parents campaigned in moral terms, fighting for "justice." Cities and downtown businesses tried to regulate traffic in the name of "efficiency." Automotive interest groups, meanwhile, legitimized their claim to the streets by invoking "freedom"—a rhetorical stance of particular power in the United States. *Fighting Traffic* offers a new

look at both the origins of the automotive city in America and how social groups shape technological change.

Val d'Europe is a new city created in 1987 and developed from 1992, located next to the first tourist destination in Europe, Disneyland Paris. The challenge of this unique architectural and urban experience was to design, ex nihilo, a city that simultaneously represents beauty, practicality and sustainability. A city that creates social diversity without architectural discrimination, limits the use of vehicles, responds to ecological imperatives, offers a balance between housing and office spaces and is harmoniously developed over time. Val d'Europe's genesis was backed by a vision: that of reviving European urban genius by inventing an authentic city, while still responding to today's demands. Here, the streets present a familiar character, the squares are convivial, the architecture is the same for both social and private housing. This book, written by two architects and illustrated with maps, photographs and original watercolours, presents, without concealing the difficulties, the process that was put into place in order to achieve the same urban quality as Europe's most beautiful cities.

Smarter New York City

Moody's Bond Record

Innovation is often presented as being in the exclusive domain of the private sector. Yet despite widespread perceptions of public-sector inefficiency, government agencies have much to teach us about how technological and social advances occur. Improving governance at the municipal level is critical to the future of the twenty-first-century city, from environmental sustainability to education, economic development, public health, and beyond. In this age of acceleration and massive migration of people into cities around the world, this book explains how innovation from within city agencies and administrations makes urban systems smarter and shapes life in New York City. Using a series of case studies, Smarter New York City describes the drivers and constraints behind urban innovation, including leadership and organization; networks and interagency collaboration; institutional context; technology and real-time data collection; responsiveness and decision making; and results and impact. Cases include residential organic-waste collection, an NYPD program that identifies the sound of gunshots in real time, and the Vision Zero attempt to end traffic casualties, among others. Challenging the usefulness of a tech-centric view of urban innovation, Smarter New York City brings together a multidisciplinary and integrated perspective to imagine new possibilities from within city agencies, with practical lessons for city officials, urban planners, policy makers, civil society, and potential private-sector partners.

The first book in the long-running Amos Walker Mysteries introduces the hard-boiled Detroit detective as he searches for an aging mobster's missing adopted daughter Private eye Amos Walker is a Vietnam veteran who was thrown out of the Police Academy for punching a fellow cadet. He's a hard man in a ruined city, scratching out a living looking for lost things. Walker's latest case comes by way of ex-mobster Ben Morningstar, who's been living out his retirement in Phoenix while raising Maria, the daughter of a long-ago murdered friend. Only now, Maria is missing and the gangster needs Walker's help. But the trail has gone cold—the only clue is a faded pornographic snapshot. Never one to give up, Walker witnesses the kidnapping of a former Vietnam friend and solves the murder of a young black labor leader while slugging his way to a solution. Fans of Raymond Chandler and Elmore Leonard's crime fiction will find Estleman's lean prose, retro style, and tough-guy hero irresistible. This ebook features an illustrated biography of Loren D. Estleman including rare photos from the author's personal collection.

A little girl's belief in Santa is restored in this ode to the magic of Christmas. This is a holiday gift readers will treasure for years to come! It's two weeks before Christmas, and Deja is worried that Santa might not be able to visit her--after all, as a city kid, she doesn't have a chimney for him to come down and none of the parking spots on her block could fit a sleigh, let alone eight reindeer! But with a little help from her family, community, and Santa himself, Deja discovers that the Christmas spirit is alive and well in her city. With bold, colorful illustrations that capture the joy of the holidays, this picture book from award-winning author Tiffany D. Jackson and illustrator Reggie Brown is not to be missed.
