At the height of the Great Depression a number of leading U.S. economists advanced a proposal for monetary reform that became known as the Chicago Plan. It envisaged the separation of the monetary and credit functions of the banking system, by requiring 100% reserve backing for deposits. Irving Fisher (1936) claimed the following advantages for this plan: (1) Much better control of a major source of business cycle fluctuations, sudden increases and contractions of bank credit and of the supply of bank-created money. (2) Complete elimination of bank runs. (3) Dramatic reduction of the (net) public debt. (4) Dramatic reduction of private debt, as money creation no longer requires simultaneous debt creation. We study these claims by embedding a comprehensive and carefully calibrated model of the

banking system in a DSGE model of the U.S. economy. We find support for all four of Fisher's claims. Furthermore, output gains approach 10 percent, and steady state inflation can drop to zero without posing problems for the conduct of monetary policy.

Heightened uncertainty since the onset of the Great Recession has materially increased saving rates, contributing to lower consumption and GDP growth. Consistent with a model of precautionary savings in the face of uncertainty, we find for a panel of advanced economies that greater labor income uncertainty is significantly associated with higher household savings. These results are robust to controlling for other determinants of saving rates, including wealth-to-income ratios, the government fiscal balance, demographics, credit conditions, and global growth and financial stress. Our estimates imply that at least two-fifths of the sharp increase in household saving rates between 2007 and 2009 can be attributed to the precautionary savings motive.

Financial Crisis, triggered by the collapse of Lehman brothers, shook the world. A decade later its spectre still haunts us. As the appalling scope and scale of the crash was revealed, the financial institutions that had symbolised the West's triumph since the end of the Cold War, seemed - through greed, malice and incompetence - to be about to bring the entire system to its knees. Crashed is a brilliantly original and assured analysis of what happened and how we were rescued from something even worse - but at a price which continues to undermine democracy across Europe and the United States. Gnawing away at our institutions are the many billions of dollars which were conjured up to prevent complete collapse. Over and over again, the end of the crisis has been announced, but it continues to hound us - whether in Greece or Ukraine, whether through Brexit or Trump. Adam Tooze follows the trail like no previous writer and has written a book compelling as history, as economic analysis and as political horror story.
