Eliminate Single Points Of Failure And Increase Uptime For Your Applications
MySQL, Apache, PHP Based Web Applications

Uno dei modi più comuni di rendere disponibili le applicazioni web, è attraverso lo stack LAMP. LAMP è un acronimo che sta per Linux, Apache, MySQL e PHP; in questo ambiente, Linux è il sistema

operativo, Apache il server web, MySQL il server di database e PHP il linguaggio di programmazione. Questa architettura può essere utilizzata per servire applicazioni open source o anche app personalizzate. Siti web famosissimi come Facebook,

**Wikipedia e Yahoo
usano questo
ambiente per servire
le loro applicazioni a
milioni di utenti in
tutto il mondo, e,
anche moltissime
applicazioni open
source, quali
WordPress, Drupal,
Joomla! MediaWiki
e SugarCRM, si
appoggiano allo**

Get Free High Availability For The LAMP Stack: Eliminate Single Points Of Failure And Increase Uptime For Your Applications

stack LAMP. Che stiate implementando o facendo da piattaforma ad un'applicazione, personalizzata, o che stiate usando una soluzione open source, dovrete usare un'architettura che massimizzi il tempo di uptime

Get Free High Availability For The LAMP Stack: dell'applicazione, elimini i single point of failure, permetta di scalare senza tempo di fermo, e sia relativamente semplice da implementare e supportare. È meglio prendersi il tempo all'inizio per tenere in considerazione i requisiti e gli

Get Free High Availability For The LAMP Stack: Eliminate Single Points Of Failure And Increase Uptime For Your Apache, MySQL, PHP Based Web Applications

obiettivi a lungo termine del servizio che state implementando, invece di prendere decisioni sull'architettura durante un momento di emergenza come può essere un potenziale aumento del traffico o un'interruzione

Get Free High Availability For The LAMP Stack: Eliminate Single Points Of Failure And Increase Uptime For Your Linux Apache MySQL PHP Based Web Applications

dell'elettricità. Fare queste cose durante un'emergenza non è il modo migliore di gestirle. Ogni progetto può avere requisiti diversi, ma in genere ci sono solo alcuni punti importanti da considerare di sicuro: la ridondanza, la

scalabilità, le prestazioni e la gestione. La ridondanza è come si riesca a reagire ad eventuali guasti, la scalabilità è la possibilità di gestire una base di utenti più grande o più piccola, le prestazioni implicano assicurarsi

Get Free High Availability For The LAMP Stack: che l'esperienza di Eliminate Single Points Of Failure un livello almeno accettabile. Aver un servizio ridondante, scalabile e ad alte prestazioni non serve a niente se non si riesce a gest

The field of agent and multi-agent systems is concerned with the

development and evaluation of sophisticated, AI-based, problem solving and control architectures for, both single and multi-agent systems. This book presents the proceedings of the 7th KES Conference on Agent and Multi-agent Systems –

Get Free High Availability For The LAMP Stack: Technologies and Applications (KES-AMSTA 2013), held in Hue City, Vietnam, in May 2013. The KES-AMSTA 2013 conference provides an internationally respected forum for scientific research in the technologies and applications of agent

Get Free High Availability For The LAMP Stack: and multi-agent systems. In all, 44 papers were selected for oral presentation and publication in this volume. Special attention is paid to the feature topics of intelligent technologies and applications in the area of e-health, social networking,

Get Free High Availability For The LAMP Stack: self-organizing systems, economics and trust management. Other topics covered include: agent oriented software engineering; beliefs engineering; desires and intentions representation; agent cooperation, coordination,

Get Free High Availability For The LAMP Stack: negotiation, organization and communication; distributed problem-solving; specification of agent communication languages; formalization of ontologies; and conversational agents. The book highlights new
