Winner of the Virginia and Warren Stone Prize awarded annually by Harvard University Press for an outstanding book on education and society What makes a great teacher great? Who are the professors students remember long after graduation? This book, the conclusion of a fifteen-year study of nearly one hundred college teachers in a wide variety of fields and universities, offers valuable answers for all educators. The short answer is—it's not what teachers do, it's what they understand. Lesson plans and lecture notes matter less than the special way teachers comprehend the subject and value human learning. Whether historians or physicists, in El Paso or St. Paul, the best teachers know their subjects inside and out—but they also know how to engage and challenge students and to provoke impassioned responses. Most of all, they believe two things fervently: that teaching matters and that students can learn.

This compelling account of the author's experience with a chronic pain disorder and subsequent interaction with the American health care system goes to the heart of the workings of power and culture in the biomedical domain. It is a medical whodunit full of mysterious misdiagnosis, subtle power plays, and shrewd detective work. Setting a new standard for the practice of autoethnography, Susan Greenhalgh presents a case study of her intense encounter with an enthusiastic young specialist who, through creative interpretation of the diagnostic criteria for a newly emerging chronic disease, became convinced she had a painful, essentially untreatable, lifelong muscle condition called fibromyalgia. Greenhalgh traces the ruinous effects of this diagnosis on her inner world, bodily health, and overall well-being. Under the Medical Gaze serves as a powerful illustration of medicine's power to create and inflict suffering, to define disease and the self, and to manage relationships and lives. Greenhalgh ultimately learns that she had been misdiagnosed and begins the long process of undoing the physical and emotional damage brought about by her nearly catastrophic treatment. In considering how things could go so awry, she embarks on a cogent and powerful analysis of the sociopolitical sources of pain through feminist, cultural, and political understandings of the nature of medical discourse and practice in the United States. She develops fresh arguments about the power of medicine to medicalize our selves and lives, the seductions of medical science, and the deep, psychologically rooted difficulties women patients face in interactions with male physicians. In the end, Under the Medical Gaze goes beyond the critique of biomedicine to probe the social roots of chronic pain and therapeutic alternatives that rely on neither the body-cure of conventional medicine nor the mind-cure of some alternative medicines, but rather a broader set of strategies that address the sociopolitical sources of pain.

This new book on PHP 7 introduces writing solid, secure, object-oriented code in the new PHP 7: you will create a complete three-tier application using a natural process of building and testing modules within each tier. The Oxford Textbook of Neurological Surgery is an up-to-date, objective and readable text that covers the full scope of neurosurgical practice. It is part of the Oxford Textbooks in Surgery series, edited by Professor Sir Peter Morris. The book is split into 20 overarching sections (Principles of Neurosurgery, Neuro-oncology of Intrinsic Tumours; Extra-axial Tumours and Skull Lesions; Cerebro-Pontine Angle Tumours; Sellar and Supra-Sellar Tumours; Posterior Fossa Tumours; Pineal tumours; Uncommon Tumours and Tumour Syndromes; Neurotrauma and Intensive Care; Vascular Neurosurgery; Principles of Spinal Surgery; Spinal Pathology; Spinal Trauma; Peripheral Nerve Surgery; Functional Neurosurgery; Epilepsy; Paediatric Neurosurgery; Neurosurgery for Cerebrospinal Fluid Disorders and Neurosurgical Infection). Each section takes a dual approach with, 'Generic Surgical Management' chapters that focus on specific clinical problems facing the neurosurgeon (e.g. sellar/supra-sellar tumour, Intradural Spina Tumours etc.) and 'Pathology-Specific' chapters (e.g. Glioma, Meningeal Tumours, Scoliosis and Spinal Deformity, Aneurysm etc.). Where appropriate, this division provides the reader with easily accessible information for both clinical problems which present in a regional fashion and specific pathologies. The generic chapters cover aspects such as operative approaches, neuroanatomy and nuances. Specifically each chapter in the book incorporates several strands. Firstly the fundamental neuroscience (anatomy, pathology, genetics etc.) that underlies the clinical practice. Secondly, a review of the requisite clinical investigations (e.g. angiography, electrodiagnostics, radiology). Thirdly, a thorough evidence based review of clinical practice. Following this a consideration of the key debates and controversies in the field with 'pro-' and 'con-' sections (e.g. minimally invasive spine surgery, microsurgical treatment of aneurysms) is provided. A summary of the key papers and clinical scales relevant to neurosurgery form the concluding part. The book is a 'one-stop' text for trainees and consultants in neurosurgery, residents, those preparing for sub-specialty exams and other professionals allied to surgery who need to gain an understanding of the field. It acts as both a point of reference to provide a focussed refresher for the experienced neurosurgeon as well as a trusted training resource.

Students entering higher education expect their studies to lead them towards some specific form of professional career. But in this age, complex internationalized professions are the main source of work for graduates, so students need to prepare themselves for a future that can be volatile, changeable and challenging. This book shows how students navigate their way through learning and become effective students; it details how to shift the focus of their learning away from the formalism associated with the university situation towards the exigencies of working life. It is in this sense that the book explores how people move from being expert students to novice professionals. This book presents a model of professional learning fashioned out of a decade of research undertaken in countries half a world away from each other—Sweden and Australia. It uses empirical research gathered from students and teachers to show how students negotiate the forms of professional knowledge they encounter as part of their studies and how they integrate their understandings of a future professional world with professional knowledge and learning. It reveals that as students move from seeing themselves as learners, they take on more of a novice professional identity which in turn provides a stronger motivation for their formal studies.
