This study is the first research work on remittances conducted in Nigeria and reveals the actual state of its remittance market. The report examines the United Kingdom residents of Nigerian origin transfer remittances home and how the funds are distributed to their beneficiaries in Nigeria. It presents the remittance industry conditions existing in the UK-Nigeria remittance corridor at the origination and distribution stages of transfers, the intermediaries who facilitate the transfers. The report makes conclusions and compares these main findings with lessons from other countries. The Nigeria remittance corridor has an equal dominance of formal and informal remittance intermediaries. Although several formal financial institutions transferring money exist in the UK, many people choose to send money informally. More collaboration between the UK and Nigeria is needed in the remittance market, to encourage the use of formal channels, and to enhance the development potential. Among its benefits, the remittance partnership (RCP) between UK and Nigeria aims to reduce the cost of remittance transfers. The Nigerian government is engaging its diaspora for economic growth. This report recommends that each government focus on improving data collection at its end of the corridor and do not neglect to provide its policymakers and its private sector with accurate information.

For the one-semester Principles of Macroeconomics courses at four- and two-year colleges and universities, this book teaches economics through real business examples. The number-one question students of economics ask themselves is, "Why am I here, and will I succeed?" Hubbard/O'Brien answers this question by demonstrating that real businesses use economics to make real decisions everyday. This is something all students can connect to, whether they're business majors or not, because students encounter businesses in their daily lives. And regardless of their career path—opening an art studio, doing social work, trading on Wall Street, working for the government, or bartending at the local pub—they can benefit from understanding the economic forces behind their work. This volume uses the study of firm dynamics to investigate the factors preventing faster productivity growth in Latin America and the Caribbean, beyond the past the limits of traditional macroeconomic analyses. Each chapter is dedicated to an examination of a different factor affecting firm performance: innovation, ICT usage, on-the-job-training, firm age, access to credit, and international linkages - highlighting the differences in firm characteristics, behaviors, and strategies. By showcasing this remarkable heterogeneity, this collection challenges regional policymakers to look beyond one-size-fits-all solutions and create balanced policy mixes tailored to distinct firm needs. This book is open access under a CC BY-NC-ND 3.0 IGO license. Sustainable development is the most important challenge facing humanity in the 21st century. The global economic growth in the recent decades has exhibited marked progress in many countries. Nevertheless, the issues of income disparity, poverty, gender gaps, and malnutrition are still a major part of the global landscape, in spite of the upward growth of the economy and technological advances. This grim picture is further exacerbated by rapid human population, unmindful resource use, ever-increasing consumption trends, and changing climate. In order to protect humanity and

planet, the United Nations issued the "2030 agenda for sustainable development," which includes but is not limited to sustainable production and consumption practices, e.g. in a sustainable bioeconomy. The hallmark of the sustainable bioeconomy is a paradigm shift from a fossil-fuel-based to a biological-based one, which is driven by the virtues of sustainability, efficient utilization of resources, and "circular economy." As the sustainable bioeconomy is based on the efficient utilization of biological resources and societal transformations, it holds the immense potential to address the Sustainable Development Goals. This book shares valuable insights into the linkages between the sustainable bioeconomy and Sustainable Development Goals, making it an essential read for policymakers, researchers and students of environmental studies.

Karlan/Morduch, *Macroeconomics*, 2nd Canadian Edition, illustrates the power of economics to help understand, analyze and explain complex and everyday real-world problems. Taking a modern approach, Karlan is organized around learning objectives and matched with sound learning tools in Connect aimed at enhancing students' analytical and critical thinking skills. Karlan presents real-life examples and encourages students to think through decisions they'll face in life and ultimately show that economics is the common thread that enables us to understand, analyze, and solve problems in Canada and around the World. The 2nd Canadian Edition has been updated to include new discussions, examples and problem material making the content even more relevant and engaging to today's student.

Decentering Comparative Analysis in a Globalizing World

This text emphasizes a modern approach to microeconomics by integrating new topics in microeconomic theory and making them accessible to students. These topics include risk and uncertainty, asymmetric information and game theory. Traditional topics are also treated in a clear way with solid applications. Modifications have been made to the text in this edition, these include new information on the theory of the firm, specifically the coverage of cost, and examples are included throughout the text to reinforce the material presented.

The substantially revised fourth edition of a widely used text, offering both an introduction to recursive methods and advanced material, mixing tools and sample applications. Recursive methods provide powerful ways to pose and solve problems in dynamic macroeconomics. Recursive Macroeconomic Theory offers both an introduction to recursive methods and more advanced material. Only practice in solving diverse problems fully conveys the advantages of the recursive approach, so the book provides many applications. This fourth edition features two new chapters and substantial revisions to other chapters that demonstrate the power of recursive methods. One new chapter applies the recursive approach to Ramsey taxation and sharply characterizes the time inconsistency of optimal policies. These insights are used in other chapters to simplify recursive formulations of Ramsey plans and credible government policies. The second new chapter explores the mechanics of matching models and identifies a common channel through which productivity shocks are magnified across a variety of matching models. Other chapters have been extended and refined. For example, there is new material on heterogeneous beliefs in both complete and incomplete markets models; and there is a deeper account of forces that shape aggregate labor supply elasticities in lifecycle models. The book is suitable for first- and second-year graduate courses in macroeconomics. Most chapters conclude with exercises; many exercises and examples use Matlab or Python computer programming languages.

Mateer and Coppock's approach teaches economic decision-making with applications that students will remember.

From Carol Jago and the authors of *The Language of Composition* comes the first textbook designed specifically for the AP* Literature and Composition course. Arranged thematically to foster critical thinking, *Literature & Composition: Reading • Writing • Thinking* offers a wide variety of classic and contemporary literature, plus all of the support students need to analyze it carefully and thoughtfully. The book is divided into two parts: the first part of the text teaches students the skills they need for success in an AP Literature course, and the second part is a collection of thematic chapters of literature with extensive apparatus and special features to help students read, analyze, and respond to literature at the college level. Only *Literature & Composition* has been built from the ground up to give AP students and teachers the materials and support they need to enjoy a successful and challenging AP Literature course. This book analyzes the reasons for lackluster performance selected Latin American countries in mobilizing subnational own-source revenues and explores policy options to increase these revenues as efficiently and equitably as possible. Seven case studies--Argentina, Bolivia, Brazil, Colombia, Mexico, Peru, and Venezuela--span a wide range of characteristics, including federal and unitary countries, different geographical sizes, levels of economic development, and degrees of revenue decentralization. In this book, subnational governments include both intermediate and local levels of government, which are distinguished in the case studies. Together, the case studies provide a reasonably representative picture of the challenges faced throughout Latin America in mobilizing subnational own-source revenues in a manner that supports equitable growth. *Decentering Comparative Analysis in a Globalizing World* aims to renew the comparative method by questioning the inherited comparative categories. By varying the analytical perspectives in different empirical and social sciences fields, this volume opens new spaces for the comparative method.

The reduction of inequalities within and between countries stands as a policy goal, and deserves to take centre stage in the design of the Sustainable Development Goals agreed during the Rio+20 Summit in 2012. The 2013 edition of *A Planet for Life* represents a unique international initiative grounded on conceptual and strategic thinking, and "most importantly" empirical experiments, conducted on five continents and touching on multiple realities. This unprecedented collection of works proposes a solid empirical approach, rather than an ideological one, to inform future debate. The case studies collected in this volume demonstrate the complexity of the new systems required to accommodate each country's specific economic, political and cultural realities. These systems combine technical, financial, legal, fiscal and organizational elements with a great deal of applied expertise, and are articulated within a clear, well-understood, growth- and job-generating development strategy. Inequality reduction does not occur by decree; neither does it automatically arise through economic growth, nor through policies that equalize incomes downward via ill conceived fiscal policies. Inequality reduction involves a collaborative effort that must motivate all concerned parties, one that constitutes a genuine political and social innovation, and one that often runs counter to prevailing political and economic forces.

The study of macroeconomics can seem a daunting project. The field is complex and sometimes poorly defined and there are a variety of competing approaches. It is easy for the senior bachelor and starting master student to get lost in the forest of macroeconomics and the mathematics it uses extensively. *Foundations of Modern Macroeconomics* is a guide book for the interested and ambitious student. Non-partisan in its approach, it deals with all the major topics, summarising the important approaches and providing the reader with a coherent angle on all aspects of macroeconomic thought. Each chapter deals with a separate area of macroeconomics, and each contains a summary section of key points and a further reading list. Using nothing more than undergraduate mathematical skills, it takes the student from basic IS-LM style macro models to the state of the art literature on Dynamic Stochastic General Equilibrium, explaining the mathematical tricks used where they are first

introduced. Fully updated and substantially revised, this third edition of Foundations of Modern Macroeconomics now includes brand new chapters covering highly topical subjects such as dynamic programming, competitive risk sharing equilibria and the New Keynesian DSGE approach.

This brand new EMEA edition of Robert Barro's popular text brings an EMEA perspective whilst also being fully updated to reflect the macroeconomics of a post-financial crisis world. Starting with long-run macroeconomics, this text explores some of the key theories and models in macroeconomics such as the Keynesian model and the business-cycle model, finishing with extending the equilibrium model to the open economy. This exciting new edition provides an accurate and unified presentation of current macroeconomic thought whilst maintaining Professor Barro's original vision for his textbook. This edition also comes with the optional extra of Aplia, a comprehensive online learning assessment tool with auto-graded randomised questions to test students' understanding.

This volume provides a unified framework for the analysis of short- and medium-run macroeconomics. It develops a core New Keynesian macro model based on imperfect competition and nominal rigidities and shows how this compares with alternatives.

"Principles of Macroeconomics is an adaptation of the textbook, Macroeconomics: Theory, Markets, and Policy by D. Curtis and I. Irvine, and presents a complete and concise examination of introductory macroeconomics theory and policy suitable for a first introductory course. Examples are domestic and international in their subject matter and are of the modern era – financial markets, monetary and fiscal policies aimed at inflation and debt control, globalization and the importance of trade flows in economic structure, and concerns about slow growth and the risk of deflation, are included. This textbook is intended for a one-semester course, and can be used in a two-semester sequence with the companion textbook, Principles of Microeconomics. The three introductory chapters are common to both textbooks."--BCcampus website.

The Great Mental Models: General Thinking Concepts

Carlin and Soskice integrate the financial system with a model of the macro-economy. In doing this, they take account of the gaps in the mainstream model exposed by the financial crisis and the Eurozone crisis. This equips the reader with a realistic modelling framework to analyse the economy both in crisis times and in periods of stability.

When it comes drawing on enduring economic principles to explain current economic realities, there is no one readers trust more than Paul Krugman. With his bestselling introductory textbook (now in a new edition) the Nobel laureate and New York Times columnist is proving to be equally effective in the classroom, with more and more instructors in all types of schools using Krugman's signature storytelling style to help them introduce the fundamental principles of economics to all kinds of students.

In the years following the global financial crisis, many low-income countries experienced rapid recovery and strong economic growth. However, many are now facing enormous difficulties because of rapidly rising food and fuel prices, with the threat of millions of people being pushed into poverty around the globe. The risk of continued food price volatility is a systemic challenge, and a failure in one country has been shown to have a profound impact on entire regions. This volume addresses the challenges of commodity price volatility for low-income countries and explores some macroeconomic policy options for responding to commodity price shocks. The book then looks at inclusive growth policies to address inequality in commodity-exporting countries, particularly natural resource rich countries. Perspectives from the Middle East and North Africa, sub-Saharan Africa, emerging Asia, and Mexico are presented and, finally, the role of the international donor community is examined. This volume is a must read for policymakers everywhere, from those in advanced, donor countries to those in countries with the poorest and most vulnerable populations.

With an accessible approach, the third European edition of Principles of Economics provides students with the tools to analyze current economic issues. The book is underpinned by a focus on seven Core Principles, which help students to make the link between economic theory and practice. The 'economic naturalist' approach, supported by exercises, problems and examples, encourages students to employ economics principles to understand and explain the world around them. Developed from the well-regarded US textbook by Frank and Bernanke, it presents an intuitive approach to economics and is suitable for all students taking a Principles of Economics course.

Handbook of Computational Economics

Institutions, Instability, and the Financial System

This edition of the World Bank has been revised and expanded by the Terminology Unit in the Languages Services Division of the World Bank in collaboration with the English, Spanish, and French Translation Sections. The Glossary is intended to assist the Bank's translators and interpreters, other Bank staff using French and Spanish in their work, and free-lance translator's and interpreters employed by the Bank. For this reason, the Glossary contains not only financial and economic terminology and terms relating to the Bank's procedures and practices, but also terms that frequently occur in Bank documents, and others for which the Bank has a preferred equivalent. Although many of these terms, relating to such fields as agriculture, education, energy, housing, law, technology, and transportation, could be found in other sources, they have been assembled here for ease of reference. A list of acronyms occurring frequently in Bank texts (the terms to which they refer being found in the Glossary) and a list of international, regional, and national organizations will be found at the end of the Glossary.

Marketing: The Core 6e by Kerin and Hartley continues a tradition of leading the market with

contemporary, cutting-edge content presented in a conversational student-oriented style, supported by the most comprehensive, innovative, and useful supplement package available. This text and package is designed to meet the needs of a wide spectrum of faculty—from the professor who just wants a good textbook and a few key supplements, to the professor who wants a top-notch fully integrated multimedia program. Marketing: The Core utilizes a unique, innovative, and effective pedagogical approach developed by the authors through the integration of their combined classroom, college, and university experiences. The elements of this approach have been the foundation for each edition of Marketing: The Core and serve as the core of the text and its supplements as they evolve and adapt to changes in student learning styles, the growth of the marketing discipline, and the development of new instructional technologies. The distinctive features of the approach are illustrated below: High Engagement Style: Easy-to-read, interactive, writing style that engages students through active learning techniques. Personalized Marketing: A vivid and accurate description of businesses, marketing professionals, and entrepreneurs—through cases, exercises, and testimonials—that allows students to personalize marketing and identify possible career interests. Marketing Decision Making: The use of extended examples, cases, and videos involving people making marketing decisions. Integrated Technology: The use of powerful technical resources and learning solutions, such as Connect, LearnSmart, SmartBook, www.kerinmarketing.com, and video links. Traditional and Contemporary Coverage: Comprehensive and integrated coverage of traditional and contemporary concepts. Rigorous Framework: A pedagogy based on the use of learning objectives, learning reviews, learning objectives reviews, and supportive student supplements.

The major goals of this revision have been to streamline the text and to present more student oriented examples. We are also providing a new design with enhanced four colour graphics. Much fine tuning and trimming has gone into almost every chapter resulting in a more approachable textbook for your students. Several chapters that are rarely used will now appear on the book's website. The 9th edition will be much better integrated with the book's website where students can get additional information and/or current events associated with many major topics in the text. Also, the website will have "Want to see the Math Notes" for those instructors that choose a more sophisticated math treatment of the major topics in both Micro and Macro. Another commitment to Instructor Support will be the annual updating of time sensitive PowerPoint slides.

This rigorous but brilliantly lucid book presents a self-contained treatment of modern economic dynamics. Stokey, Lucas, and Prescott develop the basic methods of recursive analysis and illustrate the many areas where they can usefully be applied.

Improve YOUR world. Dean Karlan and Jonathan Morduch's Macroeconomics 3e is built around the central concept that economics is a powerful and positive tool that students can use right now to improve their world. Macroeconomics uses examples and issues that are familiar to students with students' experience to draw them in and frame ideas to help develop their economic intuition. - Using a balanced approach, students are able to sharpen their own understanding of topics by focusing on the data and evidence behind the effects they see. Students are equipped to understand and respond to real-life situations through their new economic lens and challenged to decide how to improve their world. -The third edition delivers core economic concepts along with exciting new ideas in economic thought and strives to keep students engaged by confronting issues that are important in the world. - This text combines a familiar curriculum with material from current research and applied areas such as finance, behavioral economics, and the political economy. Students and faculty will find connections that break down barriers between what takes place in the classroom and what happens in our nation and our world, with applications driven by empirical evidence, data, and research. - Karlan and Morduch show students that economics is a tool to improve our world and promote better public and business policies in the world. At the same time, this third edition challenges students to reach their own conclusions about how they will improve their world.

The explosive growth in computational power over the past several decades offers new tools and opportunities for economic research. This handbook volume surveys recent research on Agent-based Computational Economics (ACE), the computational study of economic processes modeled as dynamic systems of interacting agents. Empirical referents for "agents" in ACE models can range from individuals to social groups with learning capabilities to physical world features with no cognitive function. Topics covered include: learning and adaptation; validation; network economics; social dynamics; financial markets; innovation and technological change; organizations; market microstructure; automated markets and trading agents; political economy; social-ecological systems; computational laboratory development; and methodological issues. *Every volume contains contributions from leading researchers *Each Handbook presents an accurate, up-to-date, and contained survey of a particular topic *The series provides comprehensive and accessible surveys

Focus on Personal Finance is a brief, 14-chapter book, covering the critical topics in Personal Finance courses. This 4-color, paperback text is designed and written to appeal to a range of ages, life situations, and levels of financial literacy. A unique aspect of this text is its active approach. This text will not only get your students thinking about their current situation and financial goals, but also encourage them to write to use as a guide and revise over the course of their lives. The more a student involves themselves in the assessment and worksheets provided, the more they will discover about their current habits and how to improve them for greater financial freedom. While we have many different financial goals, but none are more important than having a basic understanding of financial issues and principles with regard to their decisions. The ultimate goal of Focus on Personal Finance is to get students to this point as a first step toward achieving many financial goals they have set for themselves.
