This lesson focuses on many seemingly unrelated topics but then combines them in unexpected ways to create something greater than the sum of its parts. First we review the concept of Named Ranges. What are they? How can they help in Excel? Then we cover the OFFSET function. It is truly one of the most powerful, flexible and mostly unused functions in Excel. It is unused because it does take some getting used to, OFFSET doesn't 'work' like the rest of the Excel functions. However, we will go through this function in detail here. Then we move on to using Forms in Excel. Forms give users familiar ways to interact with an Excel worksheet, much like a form on the web. And finally, we combine Named Ranges, OFFSET, Forms and Charts to create animated charts. Excel users will be able to click the worksheet and see the charts animate in real time. There are no macros, no programming involved; just a creative way of combining existing Excel functionality. This lesson covers a lot of ground. To help everyone understand and follow along with the exercises, I have made available a sample workbook. Follow the link in the book and you can receive the workbook to work on alongside the text. The sample workbook has a bonus extra dynamic chart not covered in the book.

This lesson covers user interfaces. Most Excel models are content with having users type in a number or text in a cell and then the formulas use that input. There are more user friendly way to interact with your users. In this lesson you will learn how to include option buttons, scroll bars, check boxes and other user form objects to give your users a familiar way to interact with Excel. You will also learn how to use new formulas (not covered in previous lessons) that connect the form objects with the data in the workbook. This lesson comes with two follow along workbooks so you can practice as you read the text. All images are taken in Excel 2013 but the material should work with Excel 2007 and upwards. This material was written for the beginning Excel user in mind. The lesson is for Excel for Windows.
