

National Geographic Readers: Sharks! (Science Reader Level 2)

**** BBC Radio 4 Book of the Week **** Shark Drunk is, in part, the tale of two men in a very small boat on the trail of a very big fish. It is also a story of obsession, enchantment and adventure. A love song to the sea, in all its mystery, hardship, wonder and life-giving majesty. In the great depths surrounding the remote Lofoten islands in Norway lives the Greenland shark. Twenty-six feet in length and weighing more than a tonne, it can live for 200 years. Its fluorescent green, parasite-covered eyes are said to hypnotise its prey, and its meat is so riddled with poison that, when consumed, it sends people into a hallucinatory trance. Armed with little more than their wits and a tiny rubber boat, Morten Strøksnes and his friend Hugo set out in pursuit of this enigmatic creature. Together, they tackle existential questions, experience the best and worst nature can throw at them, and explore the astonishing life teeming at the ocean's depths.

Describes the life cycle and behavior of sharks.

Why were mummies mummified? These mysterious corpses provide a fascinating window on the past of cultures worldwide. Mummies has plenty of ghoulish intrigue to keep young readers reading. This irresistible title provides the solid science behind the myths and guarantees a successful and rewarding reading experience for kids at level 2. Mummies is a compelling combination of fun, facts, jokes and captivating photography. National Geographic supports K-12 educators with ELA Common Core Resources. Visit www.natgeoed.org/commoncore for more information.

Deadliest Animals

The cool story of volcanoes will intrigue kids and adults alike. Hot melted rock from the middle of our planet forces its way up through cracks in the Earth's crusts, exploding violently and sometimes unexpectedly in volcanic fury that can terrorize populations for months, even years. Anne Schreiber's narrative gives readers a little of the science, a little of the history, and a lot of the action. National Geographic photography fires the imagination on dramatic spreads alive with vivid images of lava, ash, molten rock, weird rocks, and steaming seawater.

Discusses various types of planes and their different functions and uses.

Examines creatures that live in the sea, including the blobfish, jellyfish, and moray eels.

They have super senses! They leap clear out of the water! They swallow prey in a single gulp! Let's face it: Sharks are ... SO COOL! And, well, so is this book! Sharks are among the world's top predators, but that's just ONE reason why they are SO COOL. So who wouldn't want to hang out with them to learn more! These books blend supercool animal photos with silly animal quips and info that will delight young readers and animal enthusiasts. For example, kids can catch the hunting habits of a great white shark while learning that its true nature is as chill as a frozen fish stick. This is the perfect little reader to get their brain buzzing and keep them laughing during down time, bedtime, or any time.

In 2011 Sy Montgomery wrote a feature for Orion magazine entitled 'Deep Intellect' about her friendship with a sensitive, sweet-natured octopus named Athena and the grief she felt at her death. It went viral, indicating the widespread fascination with these mysterious, almost alien-like creatures. Since then Sy has practised true immersion journalism, from New England aquarium tanks to the reefs of French Polynesia and the Gulf of Mexico, pursuing these wild, solitary shape-shifters. Octopuses have varied personalities and intelligence they show in myriad ways: endless trickery to escape enclosures and get food; jetting water playfully to bounce objects like balls; and evading caretakers by using a scoop net as a trampoline and running around the floor on eight arms. But with a beak like a parrot, venom like a snake, and a tongue covered with teeth, how can such a being know anything? And what sort of thoughts could it think? The intelligence of dogs, birds, and chimpanzees was only recently accepted by scientists, who now are establishing the intelligence of the octopus, watching them solve problems and deciphering the meaning of

their colour-changing camouflage techniques. Montgomery chronicles this growing appreciation of the octopus, but also tells a love story. By turns funny, entertaining, touching and profound, *The Soul of an Octopus* reveals what octopuses can teach us about consciousness and the meeting of two very different minds.
