*William Wenton is a code-breaking genius, but now he faces a new threat—one that's lurking inside him—in the second book in the William Wenton series that School Library Journal calls "part Alex Rider, part Da Vinci Code for kids, and part Artemis Fowl." After William starts to suffer from mysterious fits that leave him unable to control his body—let alone crack codes—he worries that the metal inside him is acting up. There's only one place he can go for answers: the Institute for Post-Human Research. But nothing at the Institute is the same. His room is more like a cell, and outside the window, huge searchlights sweep the skies and robot vehicles roam the grounds. William's old teachers won't tell him what's going on although it's obvious that everyone is frightened of something—or someone. When his friend Ischia finally arrives, William thinks he may have found an ally, but she's hiding things as well. As more secrets are revealed, William realizes that no one has been telling him the truth and that he may not be able to trust anyone. He's going to have to rely on his wits and his abilities to solve the mystery of what is behind the strange events at the Institute and what it all means for him.*

Animals National Geographic Books

This lush book of photography represents National Geographic's Photo Ark, a major cross-platform initiative and lifelong project by photographer Joel Sartore to make portraits of the world's animals-especially those that are endangered. His powerful message, conveyed with humor, compassion, and art- to know these animals is to save them. Sartore intends to photograph every animal in captivity in the world. He is circling the globe, visiting zoos and wildlife rescue centers to create studio portraits of 12,000 species, with an emphasis on those facing extinction. He has photographed more than 6,000 already and now, thanks to a multi-year partnership with National Geographic, he may reach his goal. This book showcases his animal portraits- from tiny to mammoth, from the Florida grasshopper sparrow to the greater one-horned rhinoceros. Paired with the eloquent prose of veteran wildlife writer Douglas Chadwick, this book presents a thought-provoking argument for saving all the species of our planet.

Set in the idyllic landscape of rural Bohemia in the 1930s, this is the tragic love story of Jarmila, the village beauty, and a toy maker who falls under her siren spell. The wife of the far older local feather-merchant, Jarmila enjoys all the pleasures her husband's wealth can buy, yet still longs for true love which she hopes to find in her affair with the penniless toy-maker. When she conceives a child by him, he urges her to leave her husband for a life of love and freedom in New York. Guilt-ridden and suddenly facing a destitute life in a strange country, Jarmila refuses to leave. Her devastated lover asks for one more meeting and tragedy ensues. The typescript of this novella was discovered recently at Prague University. Stefan Zweig, a friend of Ernst Weiss, believed it to be Weiss' best work.

The I, Claudius author's "lightning sharp interpretations and insights . . . are here brought to bear with equal effectiveness on the Book of Genesis" (Kirkus Reviews). This is a comprehensive look at the stories that make up the Old Testament and the Jewish religion, including the folk tales, apocryphal texts, midrashes, and other little-known documents that the Old Testament and the Torah do not include. In this exhaustive study, Robert Graves provides a fascinating account of pre-Biblical texts that have been censored, suppressed, and

hidden for centuries, and which now emerge to give us a clearer view of Hebrew myth and religion than ever. Venerable classicist and historian Robert Graves recounts the ancient Hebrew stories, both obscure and familiar, with a rich sense of storytelling, culture, and spirituality. This book is sure to be riveting to students of Jewish or Judeo-Christian history, culture, and religion.

Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conservation and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries, which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

Since publication over ten years ago, *The Translator's Invisibility* has provoked debate and controversy within the field of translation and become a classic text. Providing a fascinating account of the history of translation from the seventeenth century to the present day, Venuti shows how fluency prevailed over other translation strategies to shape the canon of foreign literatures in English and investigates the cultural consequences of the receptor values which were simultaneously inscribed and masked in foreign texts during this period. The author locates alternative translation theories and practices in British, American and European cultures which aim to communicate linguistic and cultural differences instead of removing them. In this second edition of his work, *Venuti*: clarifies and further develops key terms and arguments responds to critical commentary on his argument incorporates new case studies that

include: an eighteenth century translation of a French novel by a working class woman; Richard Burton's controversial translation of the Arabian Nights; modernist poetry translation; translations of Dostoevsky by the bestselling translators Richard Pevear and Larissa Volokhonsky; and translated crime fiction updates data on the current state of translation, including publishing statistics and translators' rates. The Translator's Invisibility will be essential reading for students of translation studies at all levels. Lawrence Venuti is Professor of English at Temple University, Philadelphia. He is a translation theorist and historian as well as a translator and his recent publications include: The Scandals of Translation: Towards an Ethics of Difference and The Translation Studies Reader, both published by Routledge.

*La 4e de couverture de la jaquette indique : "How should science be written? It is a question that piqued natural philosophers of the seventeenth century as they experimented with the rhetorical figures, neologisms, verse-forms, and generic variety that characterise the literary texture of their work. Inspired laymen were quick to borrow from the new philosophy and from practising scientists in order to deploy ideas and images from astronomy, optics, chemistry, biology, and medicine. Between them, scientists, natural historians, poets, dramatists, and essayists produced new, adjusted, or hybrid literary forms. The Poetics of Scientific Investigation in Seventeenth-Century England examines those forms and that literary-scientific texture, as well as representations of the scientific--the laboratory, collaborative experimental retirement, and the canons of scientific conversation--and proposes that the writing of seventeenth-century science mirrors the intellectual and*

In *Animal Rationality: Later Medieval Theories 1250-1350*, Anselm Oelze offers the first comprehensive and systematic exploration of theories of animal rationality in the later Middle Ages. Traditionally, it was held that medieval thinkers ascribed rationality to humans while denying it to nonhuman animals. As Oelze shows, this narrative fails to capture the depth and diversity of the medieval debate. Although many thinkers, from Albert the Great to John Buridan, did indeed hold that nonhuman animals lack rational faculties, some granted them the ability to engage in certain rational processes such as judging, reasoning, or employing prudence. There is thus a whole spectrum of positions to be discovered, many of which show interesting parallels with contemporary theories of animal rationality.
