**There are now
more than 550
electronic

in ' Silicon Glen'.**

In terms of the contribution to the economy, electronics is by far the most valuable industry. Its value in 1996 was approximately £ 10billion and accounted for more than half of Scotland's exports. The major product groupings within

Many of these**

companies are multi-national OEMs, who came to Scotland as inward investing companies. Early inward investing companies were from USA, followed by companies from Japan, and more recently from Taiwan and Korea. An important

segment of the industry is involved in the manufacture of computers, including IBM, Compaq, Digital and Sun. In fact approximately 40% of the PCs sold in Europe are built in Scotland. With five of the world's top eight computer manufacturers

three topics were reviewed in terms of the theories utilised in the studied articles.

Two theories (institutional and social exchange) were found to be common across the three topics. As a result, family businesses goals, sustainable supply
