Sir Grahame Clark (died 1995) was the foremost figure in world prehistoric studies. This volume presents new developments in Clark's major fields of interest, as well as reflecting on his own contribution to archaeological scholarship. The topics covered range from the origins of our own genus in Africa around two million years ago, to the issues of the Later Stone Age and the emergence of civilization in Northern Europe, Anatolia, and South-east Asia. The divide between the North Indians and the South Indian

Dravidians was created by the two British-initiated theories of the Aryan invasion of India (AII) and the Indo-European family of languages (IE). Both the theories AII and IE were mischievously engineered by the British, with their colonial and missionary agenda, guided by their world-known notorious policy, Divide and Rule. According to the AII, Aryans invaded India in about 1500 B.C. and got settled in North and forcibly pushed dark-skinned Dravidians to South. Aryans brought Sanskrit and composed the Vedas. The Dravidian Tamil, Telugu, Kannada and Malayalam are the native languages of India, not Sanskrit. With

abundant historical irrefutable evidence, it has been established that the alleged invading Aryans were originally from Aryavarta (India) who had gone overseas earlier than 1800 B.C. for trade, and had established their Vedic kingdoms in several countries. Even Greece was colonized by the Indo-Aryans. When in trouble in about 1500 BC, some of them attempted to return to India, the land of their ancestors. The rest were culturally absorbed. The returning Aryans were mistaken as invaders because they were traveling in armored horsed driven chariots. It was their return to, not invasion of India. Because of long cohabitation between Sanskrit-

speaking Aryans and Europeans, as the result of Indian colonization, Sanskrit influenced several European languages, particularly Greek and Latin. Resulting philological resemblances prompted Sir William Jones to theorize the IE, that Sanskrit and European languages have a common origin. It has been proved that Sanskrit and European languages do not have a common origin and that there is significant resemblance between Sanskrit and the Dravidian languages, much more than between Sanskrit and European languages. and superbly illustrated with examples of ancient craftsmanship, this book by an archaeologist of world renown ranges freely over the civilisations of the last five thousand years. The theme is a fascinating one. Why is it, Professor Clark asks, that human beings value precious metals, gems and a few organic materials like ivory and pearls so highly? All are difficult to obtain and largely useless for practical purposes. Yet the prestige associated with possession down the ages is undoubted. Position, sanctity and - by extension - the social and

political hierarchies of entire societies have become embodied in these materials. Though first exploited to the full in the service of early cults and rulers, their appreciation has survived social change, and personal jewellery and insignia of rank are today more common than ever before. The reasons why are authoritatively explored in a remarkable book.

In this book, Graham Connah offers an overview of archaeological authorship: its diversity, its challenges, and its methodology. Based on his own experiences, he presents his personal views about the task of

writing about archaeology. The book is not intended to be a technical manual. Instead, Connah aims to encourage archaeologists who write about their subject to think about the process of writing. He writes with the beginning author in mind, but the book will be of interest to all archaeologists who plan to publish their work. Connah's overall premise is that those who write about archaeology need to be less concerned with content and more concerned with how they present it. It is not enough to be a good archaeologist. One must also become a good writer and be able to communicate

effectively. Archaeology, he argues, is above all a literary discipline.

This book starts from the premise that methodology has always dominated archaeology to the detriment of broader social theory.

*"Accurst be he that first invented war," wrote Christopher Marlowe--a declaration that most of us would take as a literary, not literal, construction. But in this sweeping overview of the rise of civilization, Robert O'Connell finds that war is indeed an invention--an institution that arose due to very specific historical circumstances, an institution that now verges on extinction. In *Ride of the Second Horseman*, O'Connell probes the distant human past to show how and why war arose. He begins with a definition that distinguishes between war and mere feuding: war involves group rather than individual issues, political or economic goals, and direction by some governmental structure, carried out with the intention of lasting results. With this definition, he finds that ants are the only other creatures that conduct it--battling*

other colonies for territory and slaves. But ants, unlike humans, are driven by their genes; in humans, changes in our culture and subsistence patterns, not our genetic hardware, brought the rise of organized warfare. O'Connell draws on anthropology and archeology to locate the rise of war sometime after the human transition from nomadic hunting and gathering to agriculture, when society split between farmers and pastoralists. Around 5500 BC, these pastoralists initiated the birth of war with raids on Middle Eastern agricultural settlements. The farmers responded by ringing their villages with walls, setting off a process of further social development, intensified combat, and ultimately the rise of complex urban societies dependent upon warfare to help stabilize what amounted to highly volatile population structures, beset by frequent bouts of famine and epidemic

disease. In times of overpopulation, the armies either conquered new lands or self-destructed, leaving fewer mouths to feed. In times of underpopulation, slaves were taken to provide labor. O'Connell explores the histories of the civilizations of ancient Sumeria, Egypt, Assyria, China, and the New World, showing how war came to each and how it adapted to varying circumstances. On the other hand, societies based on trade employed war much more selectively and pragmatically. Thus, Minoan Crete, long protected from marauding pastoralists, developed a wealthy mercantile society marked by unmilitaristic attitudes, equality between men and women, and a relative absence of class distinctions. In Assyria, by contrast, war came to be an end in itself, in a culture dominated by male warriors. Despite the violence in the world today, O'Connell finds reason for hope. The

industrial revolution broke the old patterns of subsistence: war no longer serves the demographic purpose it once did. Fascinating and provocative, Ride of the Second Horseman offers a far-reaching tour of human history that suggests the age-old cycle of war may now be near its end.

The Cambridge World Prehistory provides a systematic and authoritative examination of the prehistory of every region around the world from the early days of human origins in Africa two million years ago to the beginnings of written history, which in some areas started only two centuries ago. Written by a team of leading international scholars, the volumes include both traditional topics and cutting-edge approaches, such as archaeolinguistics and molecular genetics, and examine the essential questions of human development around the world. The volumes are organised geographically, exploring the evolution of hominins and their expansion from Africa, as well as the formation of states and development in each region of different

JOURNEY OF OKU CIVILIZATION

Annotation Early humans did not drift north from Africa as their ability to cope with cooler climates evolved. Settlement of Europe and northern Asia occurred in relatively rapid bursts of expansion. This study tells the complex story, spanning almost two million years, of how humans inhabited some of the coldest places on earth.

The monograph of Harimau Cave and The Long Journey of OKU Civilization is like the fruit of archaeological research in OKU region by the National Archaeological Centre (Pusamas), that took place since 2007. Although earlier in the year 2001-2005 it had been conducted

similar studies. in collaboration with foreign institution (Pusamas-Institut de Recherche pour le Developpement/IRD), only in 2009 a more intensive study conducted in one of the prehistoric dwelling caves as the primadona to this study, that is Harimau Cave. The cave does not only contain a very abundant wealth of archaeological remains, its walls also keep cave prehistoric art works formerly believed nothing in the region of Sumatra. Rock painting in Harimau Cave seemed to be a bonus for the research that was originally only intended to explore the potential of the dwelling caves in Padang Bindu. Departing from the experience of similar studies in the

region, namely in karst areas, the research was accompanied by surveys in the rivers watershed as well as niche and other caves. Harimau Cave became the focus of discussion in this monograph because the wealth and archaeological potentials contained therein enable a complete reconstruction, both from the aspect of cultural character, lifestyle and human adaptation, or chronology. The articles as well as some archaeological data contained in this monograph is based on research reports about OKU Roots of Civilization which has been prepared by the editors and contributors of the monograph in the last five years. This

monograph has deliberately been prepared on parts (chapters) in which there are one or more scientific articles. This strategy is done so that the scientific information can be presented in a more concise and attractive, particularly for nonacademic circles. Archaeological data that have been through the stages of verification and in-depth analysis presented in this monograph to be used as a reference for researchers and academics. Each section begins with a description of the subject matter as well as some information as highlights. Meanwhile, the illustrations deliberately made as attractive as possible to be easily understood and pleasing. It is true

that richness remaining of Harimau Cave is very distinctive, but it is not the only one. Along with tens of other caves in the karst area of Ogan Komering Ulu (OKU), including river sites and other open sites with its remaining, all of them reserve invaluable record of the long journey of OKU civilization. This volume fills a gap in the study of an important, yet neglected case of state formation, by taking a landscape perspective to Etruria. Simon Stoddart examines the infrastructure, hierarchy/heterarchy and spatial patterns of the Etruscans over time to investigate their political development from a new perspective. The analysis both crosses the divide from prehistory

to history and applies a scaled analysis to the whole region between the Tyrrhenian Sea and the Arno and Tiber rivers, with special focus on the neglected region between Populonia on the coast and Perugia and the north Umbrian region adjoining the Apennines. Stoddart uncovers the powerful places that were in dynamic tension not only between themselves, but also with the internal structure constituted by the descent groups that peopled them. He unravels the dynamically changing landscape of changing boundaries and buffer zones which contained robust urbanism, as well as less centralized, polyfocal nucleations.

In this book, Jennifer French presents a new synthesis of the archaeological, palaeoanthropological, and palaeogenetic records of the European Palaeolithic, adopting a unique demographic perspective on these first two-million years of European prehistory. Unlike prevailing narratives of demographic stasis, she

emphasises the dynamism of Palaeolithic populations of both our evolutionary ancestors and members of our own species across four demographic stages, within a context of substantial Pleistocene climatic changes. Integrating evolutionary theory with a socially oriented approach to the Palaeolithic, French bridges biological and cultural factors, with a focus on women and children as the drivers of population change. She shows how, within the physiological constraints on fertility and mortality, social relationships provide the key to enduring demographic success. Through its demographic focus, French combines a 'big picture' perspective

“I have seen yesterday. I know tomorrow.” This inscription in Tutankhamun’s tomb summarizes *The Fifth Beginning*. Here, archaeologist Robert L. Kelly

Online Library World

Prehistory: In New Perspective

explains how the study of our cultural past can predict the future of humanity. In an eminently readable style, Kelly identifies four key pivot points in the six-million-year history of human development: the emergence of technology, culture, agriculture, and the state. In each example, the author examines the long-term processes that resulted in a definitive, no-turning-back change for the organization of society. Kelly then looks ahead, giving us evidence for what he calls a fifth beginning, one that started about AD 1500. Some might call it “globalization,” but the author places it in its larger context: a five-thousand-year arms race, capitalism’s global reach, and the

Online Library World

Prehistory: In New Perspective

cultural effects of a worldwide communication network. Kelly predicts that the emergent phenomena of this fifth beginning will include the end of war as a viable way to resolve disputes, the end of capitalism as we know it, the widespread shift toward world citizenship, and the rise of forms of cooperation that will end the near-sacred status of nation-states. It's the end of life as we have known it. However, the author is cautiously optimistic: he dwells not on the coming chaos, but on humanity's great potential.
