In Stages of Meditation, His Holiness offers his highly practical views on the subject of meditation: how to meditate, the various different procedures and approaches we can take, what we and others may gain from it. He explains how we can develop a spiritual path in a proper sequence rather than in a scattered, piecemeal fashion. He also shows the importance of building up both method and wisdom, as well as cultivating compassion and 'special insight' as we train our minds. This impressive and stimulating book will not only bring the Dalai Lama - one of the world's most popular and pragmatic spiritual leaders - to a huge new audience but, because so many people round the globe are now practising meditation, from a basis of religious faith or none, this is a work which will doubtless be in print for many years to come.

This book is composed to assist new and upcoming multi-discipline Project Engineers and Managers in obtaining the basic and necessary knowledge which is required in order to become successful and valuable members of a project team. This book will give an insight to engineering students and professionals on how different engineering disciplines are interrelated in a multi-discipline environment. Together we shall look at Engineering, Procurement and Construction (EPC) projects. EPC projects are very much the norm in the present day engineering contracting industry for capital projects of all types and sizes. Normally, engineers graduate from engineering schools and universities as single discipline engineers. After graduation, they will take up a job based on their particular engineering discipline and then progress in their career. Project Engineers / Engineering Managers combine the different disciplines into a frame work which is often referred to as multi-discipline Project Engineering. Multi-discipline project engineering is a special skill where the engineer has to have basic knowledge of all discipline deliverables. One must know the criticality of the document and how long it should take to get reviewed / commented by other discipline. Multi-discipline project engineers should have understanding of Quality, be cost consciousness and have an understanding of how deliverables effects scheduling. It is an added bonus if one has knowledge of risk management In this book, we are not going to discuss any engineering calculation details. Main focus of this book is to highlight requirements of multi-discipline co-ordination and to show some examples. Major deliverables of different disciplines are mentioned in respective chapters to give project engineers an idea of what these deliverables look like and how are they inter-related.

Teaching in Primary Schools is the first truly comprehensive overview of the issues and practicalities of primary school teaching at the approach of the millennium. Balancing theoretical principles with many practical illustrations, the book deals with essential issues such as the context of primary education, teacher competences, assessment and classroom management. It is also one of the first texts to cover the new National Curriculum for Teacher Training, which is effective from autumn 1998. The book discusses the whole of the National Curriculum for Primary Education; however, in line with current national concerns and government thinking about educational standards and priorities, whole chapters are devoted to each of the four key areas: English, mathematics, science, and information and communications technology. Teaching in Primary Schools is an invaluable handbook for both the student and the newly qualified teacher as well as for anyone considering entry into the primary teaching profession.

Grounded in research on bilingualism and adolescent literacy, this volume provides a much-needed insight into the day-to-day needs of students who are identified as long-term English language learners (LTELs). LTELs are adolescents who are primarily or solely educated in the U.S. and yet remain identified as "learning English" in secondary school. Challenging the deficit perspective that is often applied to their experiences of language learning, Brooks counters incorrect characterizations of LTELs and sheds light on students' strengths to argue that effective literacy education requires looking beyond policy classifications that are often used to guide educational decisions for this population. By combining research, theory, and practice, this book offers a comprehensive analysis of literacy pedagogy to facilitate teacher learning and includes practical takeaways and implications for classroom practice and professional development. Offering a pathway for transforming literacy education for students identified as LTELs, chapters discuss reframing the education of LTELs, academic reading in the classroom, and the bilingualism of students who are labeled LTELs. Transforming Literacy Education for Long-Term English Learners is a much-needed resource for scholars, professors, researchers, and graduate students in language and literacy education, English education, and teacher education, and for those who are looking to create an inclusive and successful classroom environment for LTELs.
