When setting up a small business accounting system, you need to choose a method of recording financial transactions. There are basically two methods of recording income and expenses – the cash basis and the accrual basis of accounting. Cash-basis. Under the cash-basis method of accounting, you record income and expenses when cash transactions are done. For example, you record revenue for a product only when the customer pays you for the product.

Cash Basis Accounting is an accounting method in which all the revenues of the company are recognized when there is actual receipt of the cash and all the expenses are recognized when they are actually paid and the method is generally followed by the individuals and the small companies. This method is generally followed by individuals and small businesses that have no inventory.

First, we'll start with the simpler of the two methods: cash basis accounting. With this method, you record income as it's received and expenses as they're paid. For example, if you invoice a client for \$1,000 on March 1 and receive payment on April 15, you would record the income as received for the month of April. This is when you actually had the money in hand.

Cash Basis vs. Accrual Basis: What's the Difference?

The accrual basis of accounting is the concept of recording revenues when earned and expenses as incurred. The use of this approach also impacts the balance sheet, where receivables or payables may be recorded even in the absence of an associated cash receipt or cash payment, respectively.
