Acute pancreatitis is a sudden inflammation of the pancreas. Causes in order of frequency include: 1 a gallstone impacted in the common bile duct beyond the point where the pancreatic duct joins it; 2 heavy alcohol use; 3 systemic disease; 4 trauma; 5 and, in minors, mumps. Acute pancreatitis may be a single event; it may be recurrent; or it may progress to chronic pancreatitis. Mild cases are usually successfully treated with conservative measures: hospitalization, pain control, nothing by mout

Acute pancreatitis - Wikipedia

Acute pancreatitis is a sudden inflammation of the pancreas gland that begins in the cells in the pancreas that produce digestive enzymes. If those digestive enzymes become active too early within the pancreas itself, the pancreas can become damaged.

Acute pancreatitis - Guts UK

New insight into the development of Acute Pancreatitis (an often fatal disease destroying the pancreas and its environment) points to novel treatment options. Acute Pancreatitis is a disease in which digestive pancreatic enzymes become abnormally active inside pancreatic cells, digesting the pancreas itself. This causes massive cell death and in about 20% of the cases life-threatening complications occur, leading to multiple organ failures.

New insights into Acute Pancreatitis - News - Cardiff ...

Acute pancreatitis usually comes on suddenly and can be mild, moderate or severe. About eight out of 10 people will have it mildly and make a full recovery after a few days. Acute pancreatitis is usually a one-off illness, but it can sometimes come back. Chronic pancreatitis is when your pancreas is constantly inflamed for a long time. This causes scarring which affects how well your pancreas works.

Pancreatitis | Health Information | Bupa UK

Acute pancreatitis is the number one gastrointestinal diagnosis prompting inpatient admission and ranks 21st on the list of all diagnoses requiring hospitalization. The incidence of acute pancreatitis ranges from 13 to 45/100,000 with equal affinity for each gender (though with differing etiologies) . Acute pancreatitis secondary to alcohol is more common in men, whereas gallstone pancreatitis is more common in women and appears to affect African Americans disproportionately for unclear reasons.

Mechanisms and Management of Acute Pancreatitis

Acute pancreatitis is an acute inflammatory process of the pancreas with varying involvement of local tissues or more remote organ systems. Mild acute pancreatitis is characterized by the absence of complications (local or systemic) or organ dysfunction. It usually has an uneventful recovery.
