## Lesson 7 6 Practice Answers

### Intermediate Algebra , Lesson 7 Algebra 1 Lesson 7 6

In an algebraic expression, the coefficient of a variable is the constant the variable is multiplied by. If the variable appears by itself then it is regarded as being multiplied by 1 and the coefficient is 1. The coefficient of  $(x)$  in the expression  $(3x + 2)$  is  $(3)$ . The coefficient of  $(p)$  in the expression  $(5 + p)$  is 1.

Lesson 6 - Illustrative

## Lesson 7.6 Practice Answers

*Mathematics Algebra 1,  
Unit 7.6*

*Technology required. When solving the equation  $(2-x)(x+1)=11$ , Priya graphs  $y=(2-x)(x+1)-11$  and then looks to find where the graph crosses the  $x$ -axis. Tyler looks at her work and says that graphing is unnecessary and Priya can set up the equations  $2-x=11$  and  $x+1=11$ , so the solutions are  $x=-9$  or  $x=10$ .*
