Problems And Solutions

Many students find solving algebra word problems difficult. The best way to approach word problems is to "divide and conquer". Break the problem down into smaller bits and solve each bit at a time. First, we need to translate the word problem into equation (s) with variables. Then, we need to solve the equation (s) to find the solution (s) to the word problems.

Algebra problems With Solutions. Example 1: Solve,

$$(x-1)^2 = [4(x-4)]^2$$

Solution: $x^2 - 2x + 1 = 16(x-4)$

$$x^2 - 2x + 1 = 16x - 64$$

$$x^2 - 18x + 65 = 0 \quad (x-13) (x-5) =$$

0. Hence, $x = 13$ and $x = 5$.

Algebra Problems for Class 6. In class 6, students will be introduced with an algebra concept. Here, you will learn how the unknown values are represented in terms of variables.
