Algorithm Design Goodrich Solution

Algorithm Design M. T. Goodrich and R. Tamassia John Wiley & Sons. Solution of Exercise R-3.3 There are several solutions. One is to draw the AVL tree created by the input sequence: 9, 5, 12, 7, 13. Now draw the tree created when you switch the 5 and the 7 in the input sequence: 9, 7, 12, 5, 13. Algorithm Design M. T. Goodrich and R.

Algorithm Design Goodrich Solution Manual

Algorithm Design M. T. Goodrich and R. Tamassia John Wiley & Sons Solution of Exercise C-1.8 Since r is represented with 100 bits, any candidate p that the eavesdropper might use to try to divide r uses also at most 100 bits. Thus, this very naive algorithm requires 2^{100} divisions, which would take about 2^{80} seconds, or at least 2^{55}
