Anatomy Nervous System Study Guide. STUDY. PLAY. Autonomic nervous system (ANS) The autonomic nervous system regulates certain body processes without the person being consciously aware. The ANS regulates things such as: blood pressure, heart and breathing rates, body temperature, digestion, metabolism, urination, sexual response, and many other things that people are not aware their body is regulating.

[Anatomy Nervous System Study Guide Flashcards | Quizlet](#)

Nervous System An online study guide to learn about the structure and function of the nervous system using interactive animations and diagrams.

[Nervous System • Structure & Function](#)

1. The Nervous System. Functions of the Nervous System. 1. Gathers information from both inside and outside the body - Sensory Function 2. Transmits information to the processing areas of the brain and spine 3. Processes the information in the brain and spine – Integration Function 4. Sends information to the muscles, glands, and organs so they can respond appropriately – Motor Function.

[The Nervous System - Science Olympiad](#)

Anatomy review for the nervous system - Week 12 Study Guide. 1. Distinguish the difference between neuron, neuroglial cells, Schwann cells, neurofibrils, and astrocytes. Neuron: masses of nerve cells in nervous tissue. Neuroglial Cells: provide neurons physiological requirements (fill spaces, give support to neurons)

[Nervous System Anatomy Study Guide - 709 Words | Cram](#)

The nervous system consists of two divisions; Central nervous system (CNS) is the integration and command center of the body. Peripheral nervous system (PNS) represents the conduit between the CNS and the body. It is further subdivided into the somatic nervous system (SNS) and the autonomic nervous system (ANS) .

[Nervous system: Structure, function and diagram | Kenhub](#)

The peripheral nervous system consists of the somatic nervous system (SNS) and the autonomic nervous system (ANS). The SNS consists of motor neurons that stimulate skeletal muscles. In contrast, the ANS consists of motor neurons that control smooth muscles, cardiac muscles, and glands. In addition, the ANS monitors visceral organs and blood vessels with sensory neurons, which provide input information for the CNS.

[The Autonomic Nervous System - CliffsNotes Study Guides](#)

Figure 1. Anatomy of the adult brain. Figure 2. The cerebral cortex and basal ganglia.. Figure 3. Prominent structures of the brainstem. The reticular activation system (RAS), one component of the reticular formation, is responsible for maintaining wakefulness and alertness and for filtering out unimportant sensory information. Other components of the reticular formation are responsible for maintaining muscle tone and regulating visceral motor muscles.

The purpose of this study guide is to facilitate your studying by giving you lists of many of the terms and structures that you will be responsible for knowing. This study guide is divided into two parts. The first part is intended primarily for use in lecture and the second part is intended primarily for use in lab.

Nervous system controls how we interact with and respond to our environment, by controlling the function of the organs in our other body systems. The nervous system organs are the brain, spinal cord and sensory organs. These are connected by neurons, which act to transmit neural signals around the body. Nervous system - an overview.
