Quiz & Worksheet - Sensation & Perception | Study.com

Perception refers to the way sensory information is organized, interpreted, and consciously experienced. Perception involves both bottom-up and top-down processing. Bottom-up processing refers to the fact that perceptions are built from sensory input. On the other hand, how we interpret those sensations is influenced by our available knowledge, our experiences, and our thoughts.

Perception Study Guide Answers

The theory that the retina contains three different color receptors- one most sensitive to red, one to green, one to blue- the combination of which produces color. Opponent- process theory. The theory that opposing retinal processes (red-green, Yellow- blue, White-black) enable color vision. For example, some cells are stimulated by green and inhibited by red; others are stimulated by red and inhibited by green.
