Learning Music Theory with Logic, Max, and Finale is a groundbreaking resource that bridges the gap between music theory teaching and the world of music software programs. Focusing on three key programs—the Digital Audio Workstation (DAW) Logic, the Audio Programming Language (APL) Max, and the music-printing program Finale—this book shows how they can be used together to learn music theory. It provides an introduction to core music theory concepts and shows how to develop programming skills alongside music

theory skills. Software tools form an essential part of the modern musical environment; laptop musicians today can harness incredibly powerful tools to create, record, and manipulate sounds. Yet these programs on their own don't provide musicians with an understanding of music notation and structures, while traditional music theory teaching doesn't fully engage with technological capabilities. With clear and practical applications, this book demonstrates how to use DAWs, APLs, and music-printing programs to create interactive resources for learning the mechanics behind

Described by music critic Alex Ross as "the most original musical thinker of our time" and having received innumerable accolades in a career spanning over fifty years, composer Steve Reich is considered by many to be America's greatest contemporary composer. His music,

however, remains largely underresearched. Rethinking Reich redresses this imbalance, providing a space for prominent and emerging scholars to reassess the composer's contribution to music in the twentieth century. Featuring fourteen tightly focused and multifarious essays on various aspects of Reich's work--ranging from analytical, aesthetic, and archival studies to sociocultural, philosophical, and ethnomusicological reflections--this edited volume reveals new insights, including those enabled by access to the growing Steve Reich Collection at the Paul Sacher Foundation archive, the premier institution for primary research on twentieth-century and
