and understanding data in high dimensions. We suppose that we are given a set x_i for $i=1, \dots, n$ of n observations of a variable vector X in R^p . That is, we suppose that each observation x_i has p dimensions: $x_i = (x_{i1}; x_{i2}; \dots; x_{ip})$; and that it is an observed value of a variable vector $X \in R^p$. Therefore, X is composed of p

The last part introduces a wide variety of exercises in applied multivariate data analysis. The book demonstrates the application of simple calculus and basic multivariate methods in real life situations. It contains altogether more than 250 solved exercises which can assist a university teacher in setting up a modern multivariate analysis course.
