Artificial Insemination Animals

Artificial insemination is commonly used instead of natural mating in many species of animals because of the many benefits it can reap. These benefits include increased safety of the animals and producer, increased production efficiency and better genetics. Artificial insemination can reduce many of the risks involved with breeding.

---

Learn more about artificial insemination - Animal Smart

Artificial insemination has been used to facilitate the reproductive success and conservation of threatened or endangered animals. Examples of wild animals that have been successfully impregnated through artificial insemination include big cats (e.g., the tiger , the puma , the cheetah , and the clouded leopard ), the white rhinoceros ( *Ceratotherium simum* ), and the onager ( *Equus onager* ).

---

Artificial insemination | Britannica

Artificial insemination (AI) is commonly used instead of natural mating in many species of animals because of the many benefits it can reap. These benefits include: increased safety of the animals and producer, increased production efficiency and better genetics.

---

Several methods of obtaining bull semen for artificial insemination in farm animals have been developed, the most common of which are electro-ejaculation and the use of the artificial vagina.

---

How To Carry Out Artificial Insemination In Farm Animals

Artificial Insemination in Farm Animals. Artificial insemination is used instead of natural mating for reproduction

purposes and its chief priority is that the desirable characteristics of a bull or other male livestock animal can be passed on more quickly and to more progeny than if that animal is mated with females in a natural fashion. This book contains under one cover 16 chapters of concise, up-to-date information on artificial insemination in buffalos, ewes, pigs, swine, sheep, goats ...

---

Artificial Insemination in Farm Animals PDF | Vet eBooks

In most domestic animals, semen is collected by means of an artificial vagina, for example, bull, ram, stallion, after allowing the male to mount either an oestrous female or a phantom. The artificial vagina consists of a lubricated liner inserted into an outer jacket, the space between the two being filled with warm water.
