The histology of fish liver differs from the mammalian in that there is far less tendency for disposition of the hepatocytes in lobules and the typical portal triads of the mammalian liver are rarely seen. Sinusoids (Fig. 8.2) are lined with endothelial cells forming a very thin cytoplasmic sheet. The nuclei of these cells are elongated and protrude into the sinusoidal lumen. The endothelium ...

Since the structural and functional basis of an organism is the cell, histology is probably the most important single study in pathology. It seems that, hitherto, no information on histology of fish had been published and this is an attempt to fill the gap. The authors have produced an excellent book. A well-written text is accompanied by some 240 good photomicrographs, some of which are in...
