Lysing Matrix Tubes. Get reproducible homogenization with bead
beating tubes and ready-to-use lysing matrices for a wealth of
sample types. Choosing the right lysing matrix for homogenizing
your cells, tissues, environmental samples, insects, and worms
is easy with MP Bio's comprehensive selection of Lysing Matrix
tubes.

Lysing Matrix Tubes | MP Biomedicals

Bead Beating Tubes: For rapid and reliable biological sample lysis from a wide variety of starting materials. Each pack contains 50 tubes. Bead beating is the most effective and versatile biological sample lysis method available. MO BIO offers you the ultimate flexibility when lysing and processing virtually any biological sample.

Product Description. Lysing Matrix Y 2 mL tube contains 0.5 mm diameter Yttria-Stabilized Zirconium Oxide beads. $Y_2O_3 + ZrO_2$ has high density and has extremely high hardness making this matrix ideal for cracking of very tough cell walls, while its smooth surface minimizes shearing. Lysing Matrix Y is used primarily for lysis of gram (+/-) bacteria, fungal tissue and spores, yeasts, molds, filamentous algae and biofilms.

Lysing Matrix Y, 2 mL tube - mpbio.com

Bead beating is an effective mechanical method used to disrupt a wide range of biological samples. At a minimum, bead beating is accomplished by rapidly agitating a sample with grinding media (beads or balls) in a bead beater (device that shakes the homogenization vessel).

Bead Beating: A Primer - OPS Diagnostics LLC

MO BIO now offers the PowerLyzer®PowerSoil DNA Isolation Kit (cat# 12855-50) with a Bead Tube suitable for high powered bead beating of soil. For more information about these products, or for references using the PowerSoil® DNA Isolation Kit with a FastPrep®instrument, please contact Technical Service at

PowerSoil DNA Isolation Kit - Qiagen

Better to use QiAamp stool DNA or Mo-Bio power soil kit, because previously you are extracting with bead beating from a single bacterial system and now you will extract from metagenomes. Therefore...

How to extract bacterial DNA from swabs using bead beating?

Is one of the most flexible and comprehensive suppliers for today's discerning molecular biologist. Browse our new website to find cutting-edge products to simplify and enhance your research immediately.

Cambio - Excellence in Molecular Biology

An automated method for reduced-biased nucleic acid isolation from a plurality of samples comprising: (a) disposing the plurality of samples into an array of sample containers; and (b) applying a mechanical force to the sample containers, wherein each sample container comprises the sample and a bead or a

plurality of beads for disrupting microbial cells and viruses, thereby providing an unbiased release of microbial nucleic acids.

AUTOMATED METHOD FOR RELEASE OF NUCLEIC ACIDS FROM ...

The filters for influent water were cut in half with a sterile scalpel and forceps, and filters were transferred to Mobio PowerWater DNA Isolation Kit (Mobio Laboratories, CA, USA) bead beating tubes and stored in -20°C . .. DNA from the filters was extracted with Mobio PowerWater DNA Isolation Kit following manufacturer's instructions.

Powerwater Dna Isolation Kit | Qiagen | Bioz

The Bead Beating will be the "go to" equipment for many sample preparation requirements for Clinical labs, Research labs, Environmental and Agricultural research and testing laboratories. Model SI-B101 Supplied With 4 Tube Holders - 12 x 1.5 / 2.0ml (vertical & horizontal), 6 x 15ml and 3 x 50ml Speed 500-4800 strokes per minute (250-2400 ...

Bead Beating VORTEX

In this protocol, duplicate 500mg samples were added to a Mo-Bio dry bead-beating tube, with 250uL Minimal Salt Solution and 500uL Lysis Buffer. This solution was then briefly vortexed, and bead beat for two minutes. Following bead beating, the solids were pelleted from solution by centrifugation for five minutes at maximum speed.

An Investigation into the Spatial Organization of Kefir ...

Add 20 μl of 50 ng μl^{-1} CARD probe and vortex (Vortex-Genie 2, MO BIO) briefly to mix. c. Wrap tubes in parafilm and tape to the sides of a beaker filled with DI water such that tubes float in an approximately horizontal orientation. d. Microwave for 30 min at 46°C , power setting of 100%. e.

Whole Cell Immunomagnetic Enrichment of Environmental ...

Use the Mo Bio Vortex Adapter in conjunction with the Vortex Genie 2 for rapid bead beating procedures. Using the Mo Bio Vortex Adapter is an inexpensive alternative to other bead beating and Fast Prep machines which offer the same technology. This particular adapter holds 2 (50 ml) centrifuge tubes at one time and will fit any Vortex Genie 2 with a 3 inch platform attachment (normally included with all Vortex Genie 2). Info Mo Bio Laboratories, Inc. Customer Service: (800) 606-6246 Web site

...

Vortex Adapter for Vortex Genie 2, holds (2) 50 ml tubes

Environmental samples are added to a bead beating tube for rapid and thorough homogenization. Cell lysis occurs by mechanical and chemical methods. Total genomic DNA is captured on a silica membrane in a spin column format. DNA is then washed and eluted from the membrane. DNA is then ready for PCR analysis and other downstream applications.

PowerSoil DNA Isolation Kit - VU

other difficult species, a 10 minute 65°C heating step may be performed prior to bead beating. More than one pulse of bead beating, or harder beads may be used, however, keep in mind that the DNA integrity will decrease. High Throughput Options MO BIO offers a vacuum based protocol for faster processing without centrifugation for the DNA binding

PowerLyzer™ PowerSoil DNA Isolation Kit

Includes 50 preps of 1.4mm ceramic (zirconium oxide) beads in 2mL standard tubes. CK14 is designed for soft tissue homogenization like brain, liver, kidney, skin, plant leaves, mammalian cells and more. Sample size range: from 20mg to 200mg tissue or 200µL to 1.6mL culture. Now available with Protein safe tubes option! Cat. No.: P000912-LYSKO-A

Precellys Lysing kits for tissue homogenizer – DNA, RNA ...

Bertin Instruments offers a range of efficient and flexible Precellys homogenizers based on bead beating technology for grinding samples prior to DNA, RNA and protein analysis. Tissue homogenizers, combined with a dedicated lysing kit, are a lab's best partner to save time and improve the efficiency of sample preparation protocols.

Tissue Homogenizer - Sample preparation with Precellys ...

and transfer 200 µl of the supernatant into a new nuclease-free tube. 4. Proceed to Total Nucleic Acid Purification, page 8 or DNA & RNA Purification, page 9. FFPE Tissue 1. Remove (trim) excess paraffin wax from ? 5 mg FFPE tissue and transfer into a nuclease-free tube (not provided). 2. Add 400 µl Deparaffinization Solution1 to the sample ...

Quick-DNA/RNA MagBead - Zymo Research

This unique hands-off homogenization uses a bead beating format and allows up to 24 samples to be processed at the same time using either a vortex adapter or a bench top homogenizer such as MO BIO's Precellys®24 Homogenizer. Nearly all types of plant tissues can be processed without hand grinding or liquid nitrogen freezing.
