ECG values are measured by placing non-invasive electrodes at the surface of the patient's skin. For a 3-lead ECG sensor, the electrodes need to be placed in a triangle (Einthoven Triangle) on the patient's chest as shown in the figure 11. Each corner of the triangle corresponds to one of the limbs: right hand, left hand, left foot.

## **Biomedical instrumentation and measurement**

Biomedical Instrumentation helps physicians to diagnose the problem and provide treatment. To measure biological signals and to design a medical instrument, concepts of electronics and measurement techniques are needed. Components of Biomedical Instrumentation System Any medical instrument consists of the following functional basic parts:

## **Biomedical Instrumentation | Electrical4U**

“Biomedical instruments” refer to a very broad class of devices and systems. A biomedical instrument is an ECG machine to many people. To others, it’s a chemical biosensor, and to some it’s a medical imaging system. Current estimates place the worldwide market for biomedical instruments at over \$200 billion.

### **Biomedical Instrumentation and Measurements by Leslie Cromwell**

The basic principle behind these pressure transducers is that pressure to be measured is applied to a flexible diaphragm which gets deformed by the action of the pressure exerted on it. This motion of the diaphragm is then measured in terms of an electrical signal. The deformation is measured by a strain gauge or LVDT.
