In this book, professor Gottfried gives us an in-depth, and yet easy to read analysis of the Black Death of the late 14th century, as well as earlier and later epidemics of various diseases. The first chapter is an examination of the three varieties of plague--bubonic (with a 50%-60% mortality), pneumonic (with a 95%-100% mortality), and septicaemic (mortality unknown as of the writing of this book).

The black death: Natural and human disaster in medieval ...

A fascinating work of detective history, *The Black Death* traces the causes and far-reaching consequences of this infamous outbreak of plague that spread across the continent of Europe from 1347 to 1351. Drawing on sources as diverse as monastic manuscripts and dendrochronological studies (which measure growth rings in trees), historian Robert S. Gottfried demonstrates how a bacillus transmitted by rat fleas brought on an ecological reign of terror -- killing one European in three, wiping out ...
