The three major plant functions that are the basics for plant growth and development are photosynthesis, respiration, and transpiration. 1. In photosynthesis, plants can store the energy from light in carbohydrates such as sugars and starches for use during days when light is limited or they can transport these chemicals to the roots. 2.

BOTANY, PLANT PHYSIOLOGY AND PLANT GROWTH
Root: The plant's roots are essential for water intake. Stem: The stem transports water through the plant and gives support to the plant's structures. Leaf: Leaves are involved in photosynthesis. Again, a vascular plant is one that has conducting tissues to move water and essential nutrients through the plant.
