It is meant to offer the practicing surgical pathologist as well pathologists in training a practical approach to the diagnosis of the many entities that can be found in the thoracic cavity. The current work covers the whole range of neoplastic and non-neoplastic thoracic pathology subdivided by anatomic site and arranged by family of tumors for neoplastic disease and by etiology or affected structure for non-neoplastic disease. The emphasis of this book lies on a morphological approach to the diagnosis of thoracic pathology, and is supported by information about ancillary techniques and inclusion of generous photomicrographs, tables and illustrations. This is the third edition of this publication which contains the latest information on vaccines and vaccination procedures for all the vaccine preventable infectious diseases that may occur in the UK or in travellers going outside of the UK, particularly those immunisations that comprise the routine immunisation programme for all children from birth to adolescence. It is divided into two sections: the first section covers principles, practices and procedures, including issues of consent, contraindications, storage, distribution and disposal of vaccines, surveillance and monitoring, and the Vaccine Damage Payment Scheme; the second section covers the range of different diseases and vaccines.

Whilst most structures made using concrete and cement-based composites have not shown signs of premature degradation, there have been notable exceptions. In addition, there is increasing pressure for new structures to remain in serviceable condition for long periods with only minimal maintenance before being recycled. All these factors have highlighted the issues of what affects the durability of these materials in different circumstances and how material properties can be measured and improved. Durability of concrete and cement composites summarises key research on these important topics. After an introductory chapter, the book reviews the pore structure and chemistry of cement-based materials, providing the foundation for understanding the particular aspects of degradation which are discussed in the following chapters. These include dimensional stability and cracking processes, chemical and microbiological degradation of concrete, corrosion of reinforcing and prestressing steels, deterioration associated with certain aggregates, effects of frost and problems involving fibre-reinforced and polymer-cement composites. With its distinguished international team of contributors, Durability of concrete and cement composites is a standard reference for all those concerned with improving the service life of structures using these materials. Analyses a range of materials such as reinforced steel in concrete, pre-stressed concrete and cement composites Discusses key degradation phenomena such as cracking processes and the impact of cold weather conditions A standard reference for those concerned with improving the service life of structures using concrete and cement based composites

In the field of construction, the maintenance and repair of concrete structures has become a core activity and the protection of concrete is thus of primary

concern. Coatings for concrete should protect against corrosion of the reinforcement and against surface attack. This book addresses the whole subject in a practical way looking at the chemistry, applications and use of the major categories of coatings.

Trauma: A Comprehensive Emergency Medicine Approach is a fully illustrated, interdisciplinary overview of trauma. Using both evidence-based approaches and a practical understanding of the emergency department, it gives a broad and in-depth review of trauma care. The entire spectrum of trauma presentations is reviewed from minor soft-tissue injuries through to major life-threatening conditions. Written by over 50 expert contributors, it gives concrete and practical recommendations for evaluation, treatment, consultation and disposition decisions on both common and unusual conditions.

Extensive use of photographs, illustrations and key information boxes is used to make the material accessible. Additional sections provide an overview of multiple other issues relating to emergency management of trauma including administrative, nursing, research and legal matters. This book provides an essential reference for anyone who is called upon to provide acute trauma care in the emergency department.

The most significant changes in isolation technology during the past five years have not been in the technology itself but in its increased acceptance. This acceptance is clearly demonstrated by the series of monographs, guidelines, and standards produced by regulatory bodies to describe best practice in the design and operation of isolators. Thoroughly revised and updated, Isolation Technology: A Practical Guide, Second Edition provides an in-depth overview of new standards and new technology. Here's what's new in the Second Edition: " Descriptions of and comments on new guidelines and standards " Technological advances - such as the new breed of sanitizing gas generators " Updates that reflect current thinking and new information Drawing on his vast experience in this field, the author delineates practical ways to improve product standards, increase operator productivity, efficiency and safety, and cut costs. Carefully designed for easy understanding by readers from multiple fields, the book reviews the how-tos for setting up clean rooms and techniques for maintaining sterility, and includes case studies, resource listings, and numerous photographs. The combination of up-to-date information and the author's clear writing style make this the ideal resource for both experienced and beginning professionals.

An understanding of the complex workings of the immune system is essential for all surgeons. Immune responses play a crucial part in the way human body reacts to infection and trauma. Immunology for Surgeons contains a high-level discussion of this difficult clinical area. The text looks at tumor immunobiology and immunotherapy as well as the worldwide results of various clinical trials. The topics discussed focus on relevant immunological and molecular biological trends for future treatment of complex surgical disease. The main objective of the text is to render a difficult area accessible for the postgraduate surgical trainee and established surgeon who is interested in immunology.
