Nobel Prize winner Pearl S. Buck's engagement with (neo-)missionary cultures in the United States and China was unique. Against the backdrop of her missionary upbringing, Buck developed a fictional project which both revised and reaffirmed American foreign missionary activity in the Pacific Rim during the 20th century. Vanessa Künnemann accurately traces this project from America's number one expert on China - as Buck came to be known - from a variety of disciplinary angles, placing her work squarely in

The notion of systems has helped
revolutionize translation studies since the
1970s. As a key part of many descriptive
approaches, it has broken with the
prescriptive focus on what translation
should be, encouraging researchers to ask
what translation does in specific cultural
settings. From his privileged position as a
direct participant in these developments,
Theo Hermans explains how
contemporary descriptive approaches
came about, what the basic ideas were, and
how those ideas have evolved over time.
His discussion addresses the fundamental
problems of translation norms,

File Type PDF Buck The System English Edition

equivalence, polysystems and social systems, covering not only the work of Levý, Holmes, Even-Zohar, Toury, Lefevere, Lambert, Van Leuven-Zwart, Dhulst and others, but also giving special attention to recent contributions derived from Pierre Bourdieu and Niklas Luhmann. An added focus on practical questions of how to investigate translation (problems of definition, description, assessment of readerships, etc.) makes this book essential reading for graduate students and indeed any researchers in the field. Hermans' account of descriptive translation studies is both informed and critical. At the same time, he demonstrates the strength of the basic concepts, which have shown considerable vitality in their evolution and adaptation to the debates of the present day.
