

# *C C Gold*

This book is part of the TREDITION CLASSICS series. The creators of this series are united by passion for literature and driven by the intention of making all public domain books available in printed format again - worldwide. At trediton we believe that a great book never goes out of style. Several mostly non-profit literature projects provide content to trediton. To support their good work, trediton donates a portion of the proceeds from each sold copy. As a reader of a TREDITION CLASSICS book, you support our mission to save many of the amazing works of world literature from oblivion.

***This book reviews the field of Knowledge Management, taking a holistic approach that includes both "soft" and "hard" aspects. It provides a broad perspective on the field, rather than one based on a single viewpoints from Computer Science or Organizational Learning, offering a comprehensive and integrated conception of Knowledge Management. The chapters represent the best Knowledge Management articles published in the 21st century in Knowledge Management Research & Practice and the European Journal of Information Systems, with contributors including Ikujiro Nonaka, Frada Burstein, and***

***David Schwartz. Most of the chapters contribute significantly to practise as well as theory. The OR Essentials series presents a unique cross-section of high quality research work fundamental to understanding contemporary issues and research across a range of Operational Research topics. It brings together some of the best research papers from the highly respected journals of the Operational Research Society, also published by Palgrave Macmillan.***

***This thesis addresses the coordination chemistry and reactivity of copper and gold complexes with a focus on the elucidation of (i) the metal-mediated activation of  $\sigma$ -bonds and (ii) the migratory insertion reaction. Both***

***processes are of considerable importance in organometallic chemistry, but remain elusive for Cu and Au complexes. In this work, the author contributes significant advances: The first  $\sigma$ -SiH complexes of copper are experimentally and computationally characterized, yielding valuable insights into  $\sigma$ -bond activation processes for copper. Evidence for a highly unusual migratory syn insertion of unsaturated organic molecules into the gold-silicon bond of silylgold (I) complexes is provided and the corresponding***

***mechanism identified. The intermolecular oxidative addition of  $\sigma$ -SiSi,  $\sigma$ -CC and  $\sigma$ -CX (X=halogen) bonds with molecular gold (I) complexes is studied in detail, effectively demonstrating that this reaction, usually considered to be impossible for gold, is actually highly favored, provided an adequate ligand is employed. The use of small-bite angle bis (phosphine) gold (I) complexes allows for the first time the oxidative addition of  $\sigma$ -CC and  $\sigma$ -CX bonds for gold (I). These results shed light on an***

***unexpected reactivity pattern of gold complexes and may point the way to 2-electron redox transformations mediated by this metal, opening up new perspectives in gold catalysis.***

first edition of Gold Coins of the World made its debut in 1958, it forever changed the way gold coins were collected, cataloged, traded, and priced. For the first time, one book provided a reliable guide for a subject which previously required an often expensive investment in multiple volumes of literature, some of it rare and antique, and much of it badly out-of-date. With the publication of this pioneering work, Robert Friedberg (1912-1963) established himself as an international icon in the field of numismatic literature. This book, and the 'Friedberg Numbering System' he developed became then,

and is still today, the internationally-recognized standard for systematically identifying any gold coin ever made. From just 384 pages in 1958, Gold Coins of the World has expanded to the extent that it now contains more than triple the information of its ancestor. It still stands alone as the first and only book to describe, catalog and price two millennia of gold, platinum, and palladium coin issues from across the globe. From the first coins of the ancient Greeks to the most recently-issued modern commemoratives, they are all here, an astonishing compilation of more than 21,000

## Download Free C C Gold

individual coin listings accompanied by over 8,000 actual-size photographs. The prices have been completely updated, for the most part raised substantially, to reflect the current market. Entire sections have been expanded, many illustrations have been added or improved, and hundreds of new discoveries and recent issues have been included for the first time. Arthur Friedberg, president of the International Association of Professional Numismatists from 2001 to 2007 and now its Honorary President, and Ira Friedberg, have completely revised and expanded their late father's work. They have had the valuable

assistance and cooperation of a who's who of the leading numismatists on every continent in bringing this edition to fruition. For the numismatist, banker, economist, historian, institution of higher learning, or a fancier of the noble metal in all its forms, Gold Coins of the World is a book for every library, public and private.

This bibliography contains 455 references to articles from the open literature. An author index and literature reference source are also included.

This book is about supramolecular gold chemistry. This book provides a unique international forum aimed at covering a broad description of results involving the supramolecular chemistry of gold with a special focus on the gold-sulfur interface leading to hybrid materials ranging from gold-thiolate complexes to thiolate-

## Download Free C C Gold

protected gold nanoclusters and gold–thiolate supramolecular assemblies or nanoparticles. The role of thiolates on the structure and optical features of gold nanohybrid systems (ranging from plasmonic gold nanoparticles and fluorescent gold nanoclusters to self-assembled Au-containing thiolated coordination polymers) is highlighted in the 12 papers presented in this book.
