Mission Statement: The current education policy emphasis on higher performance standards, school-level accountability, and market-based reform presents important research challenges within the field of school finance. The simultaneous pursuit of both equity and efficiency within this policy context creates an unprecedented demand for rigorous, timely, and field-relevant research on fiscal practices in schools. This book series is intended to help meet this demand. Specifically, the series provides a scholarly forum for interdisciplinary research on the financing of public, private,

working-class northeastern towns, the rural black children of the South, the prosperous adolescents of midwestern suburbs. How did educators respond to the fiscal crisis, and why did Americans retain their faith in public schooling during the cataclysm? The authors examine how New Dealers regarded public education and the reaction of public school people to the distinctive New Deal style in programs such as the National Youth Administration. They illustrate the story with photographs, cartoons, and vignettes of life behind the schoolhouse door. Moving from that troubled period

to our own, the authors compare the anxieties of the depression decade with the uncertainties of the 1970s and 1980s. Heirs to an optimistic tradition and trained to manage growth, school staff have lately encountered three shortages: of pupils, money, and public confidence. Professional morale has dropped as expectations and criticism have mounted. Changes in the governing and financing of education have made planning for the future even riskier than usual. Drawing on the experience of the 1930s to illuminate the problems of the 1980s, the authors lend historical perspective to current

This book first gives a brief overview of regional issues and a history of education in Lithuania and describes the development of education in the country since the political changes. It then presents an analysis of the entire education system and identifies key directions for reforms.

Analyzes an array of issues pertaining

to accessibility, student achievement, governance, and operation of charter schools in California. Four specific research questions were investigated: (1) What population of students attends charter schools? (2) Is student achievement higher in charter schools than in conventional public schools? (3) What oversight and support do the chartering authorities provide? (4) How do charter schools differ from their conventional public school counterparts in terms of their operation, including finances, academic achievement, and staffing?

data for the 1977-91 time period. Drawing on the endogenous growth literature, a model is developed to capture the impact of public education expenditure on private sector capital formation. The implications of this model are tested in the context of an econometric model assessing the impact of education and other variables on the share of private investment in GDP. The empirical results reveal that

public education outlays, as well as economic growth, have a significant effect on private capital formation. Public investment has a negative effect on private investment, while real interest rates and external debt burdens are found to have no statistically significant impact on private investment.
