*In spite of the robust development of venture capital that has occurred over the last three decades, returns from venture capital have been declining. This book focuses on a simple question: why? The answer lies in the context of multiple deformations that have occurred throughout the venture capital process. The book critically assesses the ways in which interactions between different stakeholders in the venture capital ecosystem change (or "deform") venture capital, decreasing its value. Klonski also reveals that venture capital actually has few benefits—and some outright disadvantages—for entrepreneurs, and it can*

has emerged and is able to sustain and intensify its own deep inner contradictions. Capitalism clearly explains these contradictions, which are so relevant again today in the wake of the financial crisis. This clear and engaging guide explains capitalism for absolute beginners. Fornäs situates Marx's ideas in context, remaining faithful to the concepts and structure of his work. This complete introduction to Marx's economy critique covers all three volumes of Capital. It explores all the main aspects of Marx's work - including his economic theory, his philosophical sophistication and his political critique - introducing the reader to Marx's typical blend of sharp arguments, ruthless social reportage and

**This textbook offers a comprehensive guide to the**

**systematic structure of capitalism, while at the same time introducing readers to all three volumes of Marx's Capital. Based on his extensive expertise on Marx's critique of political economy, the author reveals the specific structure of production in capitalist societies and explicates what sets this system apart from other modes of production. Marx's political economy is explained in a systematic and easy-to-understand manner, using numerous illustrative diagrams to complement the text. This textbook will appeal to all students and scholars looking for a more comprehensive, systematic and theoretical explanation of capitalism, equipping them with a solid theoretical understanding of its core structure.**

**After the collapse of the Soviet Union, there were high hopes of Russia's "modernisation" and rapid political and economic integration with the EU. But now, given its own policies of national development, Russia appears to have 'limits to integration'. Today, much European political discourse again evokes East/West civilisational divides and antagonistic geopolitical interests in EU-Russia relations. This book provides a carefully researched and timely analysis of this complex relationship and examines whether this turn in public debate corresponds to local-level experience – particularly in border areas where the European Union and Russian Federation meet. This multidisciplinary book - covering geopolitics, international**

**relations, political economy and human geography - argues that the concept 'limits to integration' has its roots in geopolitical reasoning; it examines how Russian regional actors have adapted to the challenges of simultaneous internal and external integration, and what kind of strategies they have developed in order to meet the pressures coming across the border and from the federal centre. It analyses the reconstitution of Northwest Russia as an economic, social and political space, and the role cross-border interaction has had in this process. The book illustrates how a comparative regional perspective offers insights into the EU-Russia relationship: even if geopolitics sets certain constraints to co-operation, and market**

Combustion technology has traditionally been

dominated by air/fuel combustion. However, two developments have increased the significance of oxygen-enhanced combustion—new technologies that produce oxygen less expensively and the increased importance of environmental regulations. Advantages of oxygen-enhanced combustion include less pollutant emissions as well as increased energy efficiency and productivity. Oxygen-Enhanced Combustion, Second Edition compiles information about using oxygen to enhance industrial heating and melting processes. It integrates fundamental principles, applications, and equipment design in one

This book presents some of the most trenchant critical analyses of the widespread claims for the recent emergence of a knowledge economy and the attendant need for greater lifelong learning. The book contains two sections: first, general critiques of the limits of current notions of a knowledge economy and required adult learning, in terms of historical comparisons, socio-political construction and current empirical evidence; secondly, specific challenges to presumed relations between work requirements and

learning through case studies in diverse current workplaces that document richer learning processes than knowledge economy advocates intimate. Many of the leading authors in the field are represented. There are no other books to date that both critically assess the limits of the notion of the knowledge economy and examine closely the relation of workplace restructuring to lifelong learning beyond the confines of formal higher education and related educational policies. This reader provides a distinctive overview for future studies of relations between work and learning in contemporary

societies beyond caricatures of the knowledge economy. The book should be of interest to students following undergraduate or postgraduate courses in most social sciences and education, business and labour studies departments, as well as to policy makers and the general public concerned about economic change and lifelong learning issues. Marxism has long been accused of economic determinism, reductionism and a silence on human experience. Beyond Capital argues that these problems can be traced back to Marx's failure to write his planned book on Wage-Labour. Added to this the subsequent ignorance of Marx's method, the result has been an inaccurate presentation of Marxian. Rather than rejecting Marx, Beyond Capital argues that his 'political economy of the working class' and the process of struggle are central for going beyond capitalism.
