Issues Around Aligning Theory, Research and Practice in Social Work Education provides a reflection on social work education with a slant towards an Afrocentric approach, aiming to facilitate strong reflective thinking and to address local realities about social work education on the African continent as well as in broader global contexts. This volume focuses on issues around aligning theory, research and practice in social work education. A significant contribution is made here to the scholarly understanding of opportunities to sustain the academic discourse on social work education. Social work as a profession and a social science discipline is dynamic, and it ought to meet the challenges of the realities of the societies in which it serves, given the history of the changing society of South Africa from apartheid to democracy. Over the years, social work education and training has undergone tremendous curricular changes with the enactment of the White Paper for Social Welfare and the national review, respectively, by the South African Council for Social Services Professions (SACSSP) and the Council on Higher Education (CHE) for the re-accreditation of all Bachelor of Social Work (BSW) programmes in South Africa fulfilling the prescripts of the Higher Education Act (No. 101 of 1997, as amended) and Social Service Professions Act (No. 110 of 1978). It is worth mentioning that the curricular changes will also continue with the current reviewing of Social Service Professions Act (No. 110 of 1978), as amended, which is underway in South Africa. This book is really ground-breaking! The Afrocentric perspective on social work practice contributes to the current discourse on decolonisation of social work teaching and practice. From a methodological perspective, the book is premised on multi-, inter- and trans-disciplining in social sciences. It covers aspects of social work education and practice through research (narrative, qualitative, African methodology, secondary data analysis, etc.), engendering values and ethics, report writing, supervision in fieldwork as well as exchange programmes and international service-learning, addressing a number of concepts such as cultural competency, cultural awareness and sensitivity are addressed.

An Essay on Entitlement and Deprivation

A Review of Literature

The Syrian refugee crisis, which began in 2011, is one of the most pressing disasters in the world today, with its effects reverberating around the globe. By the end of 2015, more than 7.6 million of the country's people had been internally displaced and 4.3 million were registered refugees. The number of internally displaced persons and refugees amounts to about half of Syria's precrisis population. Thousands have died while trying to reach safety. Due to the large humanitarian response, there is now a wealth of available information on refugees' income and expenses, food and nutrition, health, education, employment, vulnerability, housing, and other measures of well-being. These data have been little explored, as humanitarian organizations face daily challenges that make the full use of existing data very difficult. The Welfare of Syrian Refugees: Evidence from Jordan and Lebanon aims to assess the poverty and vulnerability of these refugees and evaluate existing and alternative policies designed to help them. The authors find that current policies, including cash transfers and food vouchers, are effective in reducing poverty, but fail to lead to nor are they designed to yield economic inclusion and self-reliance. Those goals would require a different humanitarian and development paradigm, one that focuses on growth policies for areas affected by refugees where the target population has a mix of refugees and hosting populations. This volume is the result of the first comprehensive collaboration between the World Bank Group and the United Nations High Commissioner for Refugees (UNHCR) and aims to better understand and ultimately improve the well-being of Syrian refugees living in Jordan and Lebanon.

Cost-Benefit Analysis for Development

The Asian Development Bank (ADB) has been continuously undertaking measures to enhance the effectiveness of its operations. To improve projects both at the preparation and implementation stages, ADB issued the Guidelines for Economic Analysis of Projects in 1997 as a means to enhancing project quality at entry. The conduct of proper economic analysis helps ensure the efficient use of development funds and public resources and thereby increase aid effectiveness. This practical guide is a supplement to the Guidelines for the Economic Analysis of Projects. It provides an overview of recent methodological developments in cost-benefit analysis as well as suggested improvements in the economic analysis of projects in selected sectors through case studies. These case studies illustrate the application of suggested methodologies, taking into account sector-specific needs, as well as difficulties faced by practitioners in terms of data and time constraints during project processing. It also aims to contribute to ADB's capacity building initiatives as this will be the main reference material for conduct of economic analysis.

Not so long ago, it seemed the intellectual positions on globalization were clear, with advocates and opponents making their respective cases in decidedly contrasting terms. Recently, however, the fronts have shifted dramatically. The aim of this publication is to contribute philosophical depth to the debates on globalization conducted within various academic fields – principally by working out its normative dimensions. The interdisciplinary nature of this book's contributors also serves to scientifically ground the ethical-philosophical discourse on global responsibility. Though by no means exhaustive, the expansive scope of the works herein encompasses such other topics as the altering consciousness of space and time, and the phenomenon of globalization as a discourse, as an ideology and as a symbolic form.

The State of Economic Inclusion Report 2021 sheds light on one of the most intractable challenges faced by development policy makers and practitioners: transforming the economic lives of the world's poorest and most vulnerable people. Economic inclusion programs are a bundle of coordinated, multidimensional interventions that support individuals, households, and communities so they can raise their incomes and build their assets. Programs targeting the extreme poor and vulnerable groups are now under way in 75 countries. This report presents data and evidence from 219 of these programs, which are reaching over 90 million beneficiaries. Governments now lead the scale-up of economic inclusion interventions, often building on preexisting national programs such as safety nets, livelihoods and jobs, and financial inclusion, and 93 percent of the total beneficiaries are covered by government programs. The report offers four important contributions: • A detailed analysis of the nature of these programs, the people living in extreme poverty and vulnerability whom they support, and the organizational challenges and opportunities inherent in designing and leading them. • An evidence review of 80 quantitative and qualitative evaluations of economic inclusion programs in 37 countries. • The first multicountry costing study including both government-led and other economic inclusion programs, indicating that programs show potential for cost efficiencies when integrated into national systems. • Four detailed case studies featuring programs under way in Bangladesh, India, Peru, and the Sahel, which highlight the programmatic and institutional adaptations required to scale in quite diverse contexts. Data from the report are available on the PEI Data Portal (<http://www.peiglobal.org>), where users can explore and submit data to build on this baseline.

Hard-headed evidence on why the returns from investing in girls are so high that no nation or family can afford not to educate their girls. Gene Sperling, author of the seminal 2004 report published by the Council on Foreign Relations, and Rebecca Winthrop, director of the Center for Universal Education, have written this definitive book on the importance of girls' education. As Malala Yousafzai said, "The world is not going to change until girls are educated." The world is not going to change until girls are educated. That any child could be denied an education due to poverty, custom, the law, or terrorist threats is just wrong and unimaginable. More than 1,000 studies have provided evidence that high-quality girls' education around the world leads to wide-ranging returns: Better outcomes in economic areas of growth and incomes Reduced rates of infant and maternal mortality Reduced rates of child marriage

HIV/AIDS and malaria Increased agricultural productivity Increased resilience to natural disasters Women's empowerment What Works in Girls' Education is a compelling work for both concerned global citizens, and any academic, expert, nongovernmental organization (NGO) staff member, policymaker, or journalist seeking to dive into the evidence and policies on girls' education. This book discusses "tourism and hospitality" from different perspectives and disciplines. In addition, this book, considering the tourism and hotel management terminology, is expected to be a source book for the theoretical and practical scientific studies in the fields which is in close relationship such as gastronomy, recreation and marketing.

Mobility is fundamental to economic and social activities such as commuting, manufacturing, or supplying energy. Each movement has an origin, a potential set of intermediate locations, a destination, and a nature which is linked with geographical attributes. Transport systems composed of infrastructures, modes and terminals are so embedded in the socio-economic life of individuals, institutions and corporations that they are often invisible to the consumer. This is paradoxical as the perceived invisibility of transportation is derived from its efficiency. Understanding how mobility is linked with geography is main the purpose of this book. The third edition of The Geography of Transport Systems has been revised and updated to provide an overview of the spatial aspects of transportation. This text provides greater discussion of security, energy, green logistics, as well as new and updated case studies, a revised content structure, and new figures. Each chapter covers a specific conceptual dimension including networks, modes, terminals, freight transportation, urban transportation and environmental impacts. A final chapter contains core methodologies linked with transport geography such as accessibility, spatial interactions, graph theory and Geographic Information Systems for transportation (GIS-T). This book provides a comprehensive and accessible introduction to the field, with a broad overview of its concepts, methods, and areas of application. The accompanying website for this text contains a useful additional material, including digital maps, PowerPoint slides, databases, and links to further reading and websites. The website can be accessed at: <http://people.hofstra.edu/geotrans> This text is an essential resource for undergraduates studying transport geography, as well as those interest in economic and urban geography, transport planning and engineering.

This paper explores how fiscal policy can affect medium- to long-term growth. It identifies the main channels through which fiscal policy can influence growth and distills practical lessons for policymakers. The particular mix of policy measures, however, will depend on country-specific conditions, capacities, and preferences. The paper draws on the Fund's extensive technical assistance on fiscal reforms as well as several analytical studies, including a novel approach for country studies, a statistical analysis of growth accelerations following fiscal reforms, and simulations of an endogenous growth model.
