### ***Cc3000 Host Programming Guide***

***Below the microSD slot is a 3.3V regulator and the CC3000 module, which is connected to the antenna section at the bottom of the board. By default the CC3000 is connected to the chip antenna, but you can move the Antenna Select capacitor if you want to Bring Your Own Antenna. To the right of the CC3000 module is a level shifter that allows the 3.3V logic of the CC3000 to communicate with the 5V logic normally found on the Arduino.***

***CC3000 Hookup Guide - [learn.sparkfun.com](http://learn.sparkfun.com)***

***Read PDF Cc3000 Programming Guide Cc3000 Programming Guide Read Book Cc3000 Host Programming Guide. As opposed to the Shield, the CC3000 Breakout Board contains just the CC3000 module, an antenna section, a voltage regulator, and a level shifter. It can work with any 3.3V or 5V logic microcontroller that can communicate via SPI. CC3000***

In or case user should be able to either add profile via wired connection Or thru SmartConfig. We are using TiWi-SL (CC3000) module. Here I have following questions/scenarios with respect to profile saved by SmartConfig and by***

*wlan\_add\_profile() API.*

*[Resolved] Priorities of profiles created by SmartConfig ...*

*The best I can find is on the Host Programming Guide page and it only shows four command/receipt transactions, however I read on one of these forum entries that there around 35 total SPI commands that the device supports. Please post this complete set of commands of the SPI interface for the CC3000.*

*[Resolved] CC3000 Full SPI Command Set Documentation ...*

*According to the CC3000 Host Programming Guide, "The clock and phase settings for the SPI are CPHA 0 and CPOL 0, meaning that the data is sampled on the falling edge of the clock cycle." However, from what I've read about SPI clock and phase settings for CPHA and CPOL, like the below from Wikipedia as well as my MCU's data sheet, CPHA=0 and CPOL=0 mean data is sampled on the clock's rising edge.*

*[Resolved] CC3000 SPI Clock Polarity and Phase - Wi-Fi ...*

*Raghavendra Shenoy I have done a packet capture from the server to which the CC3000 is connecting using the following command: tshark -f"host 67.255.5.128 and port 80" -w capture.pcap. That packet capture is attached in hopes that perhaps it gives some*

*insight into what's going wrong. Please can you take a look and see if it helps?*

*CC3000 troubles with "large" file download - Wi-Fi forum ...*

*In CC3000, it is custom to call the wlan\_init() function for initializing the host driver callbacks and other driver parameters. In CC3100, WLAN driver initialization is no longer explicitly required from a host application; much of the functionality is handled through the definitions given within user.h when doing the driver porting as*

*CC3000 - CC3100 SimpleLink Wi-Fi API Porting*

*Also, if you look at the CC3000 Host Programming Guide, you'll see it says, "Unsolicited events are not triggered by the CC3000 host driver and are initiated on the CC3000 device (for example, one unsolicited event, Init Complete, comes after the WLAN\_EN line is asserted and the CC3000 finishes its initialization process).*

*[Resolved] Difference between PWR\_EN and WLAN\_EN - Wi-Fi ...*

*link does not work, go to TI's CC3000 Wi-Fi Downloads page and navigate to the "CC3000 SmartConfig" section to download the "Android SmartConfig Application." Run the self-extracting .exe and accept the defaults. The program will unzip a series of folders to C:\TI\CC3000AndroidApp. Using a USB cable, plug your phone into your*
