mass,...

CFD modeling of boiling bubbly flow for DNB investigations

Subcooled boiling in upward non-isothermal turbulent bubbly flow in tubes is numerically modeled using ANSYS-CFX 12 in this contribution. The approach is based on the RPI wall boiling model developed by Kurul and Podowski. The interfacial non-drag forces are also investigated and included in the model.

CFD Modeling of Subcooled Boiling in Vertical Bubbly Flow ...

CFD modeling of boiling bubbly flow for DNB investigations CFD Two Fluid Model for Adiabatic and Boiling Bubbly Flows in Ducts 31 For the bubbly flow analyzed during this study, the two-fluid model is comprised of two fields: liquid continuous ($k = 1$) and dispersed bubbles ($k = 2$) and the mass

boiling bubbly flow, CFD, DNB, fuel rod bundle - Begell ...

This paper focuses on the modelling and the numerical simulation with the NEPTUNE_CFD code of cavitation phenomena and boiling bubbly flows. Compressible, unsteady, turbulent 3D two-phase flow is computed by the NEPTUNE_CFD solver, developed jointly by EDF R&D and CEA.

Modelling and computation of cavitation and boiling bubbly ...

The PWR tests were considered in PSBT. This paper describes the use of three-dimensional computational fluid dynamics (CFD) to model the

Read PDF Cfd Modeling Of Boiling Bubbly Flow For Dnb Investigations

boiling two-phase flows in one of the 5-by-5 rod bundle tests. The commercial CFD software STAR-CCM+ v6.06 was used in this study. The rod bundle with all the spacers was modeled explicitly using unstructured computational grids.

CFD Modeling of Boiling Flow in PSBT 5×5 Bundle

The two-fluid model we use for our boiling bubbly flow calculations is constituted of the following six balance equations (e.g.,): (i) two mass balance equations: where is the time, denote the volumetric fraction of phase , its averaged density and velocity and is the interfacial mass transfer per unit volume and unit time; the phase index takes the values for the liquid phase and for the gas phase;

Modeling of Multisize Bubbly Flow and Application to the ...

The turbulent convection heat flux is calculated in the CFX model version (see Winterle, 2004) in much the same way as for a pure liquid flow without boiling, but multiplied by the fraction of area unaffected by the bubbles, i.e.: (2) $Q_C = (1 - A_W) h_C (T_W - T_L)$ Here h_C is the heat transfer coefficient which is written using the temperature wall function $T + (y +)$ known from Kader (1981) as (3) $h_C = \rho C_P u_{\tau} T +$ where non-dimensional variables (indicated by superscript
