Energy –ability to do work; forms of energy: heat, light, chemical, electrical, mechanical, kinetic, potential A. Energy for living things comes from - food Originally the energy in food comes from - sun

Cell Energy (Photosynthesis and Respiration) Notes The description of photosynthesis here refers to structures and actions in plants, but the fundamentals apply as well to algae and to some aspects of prokaryote (cyanobacterial) photosynthesis. Most of the reactions occur simultaneously in nanoseconds (10⁻⁹) or less in various parts of the chloroplasts, but understanding the process is easier if it's separated into sequential steps.

AP Biology Photosynthesis Chapter 8 Reading Guide ANSWER KEY photosynthesis with this chemical equation: 6 CO₂ + 12 H₂O + Light energy → C₆H₁₂O₆ + 6 O₂ + 6 H₂O We use glucose (C₆H₁₂O₆) here to simplify the relationship between photosynthesis and respiration, but the direct product of photosynthesis is actually a three-carbon sugar that can be used to make glucose. Water appears on both ...
