Class 11 Maths Chapter 3 Exercise 3.1 Theory (Angles) || Trigonometry Class 11 Maths NCERT SolutionsChapter 3 Exercise Solutions Principles

Let  $a_n = 1/n$ , and it is clear that it diverges. Let  $a_n = 1$  whenever  $n$  is a square and  $a_n = 2 - n$  otherwise. This series clearly diverges, since the terms do not tend to 0 as  $n \rightarrow \infty$ . Then  $\sum_{n=1}^{\infty} (1/n^2 + (-1)^n/n)$   $\sum_{n=1}^{\infty} (1/n^2 + (-1)^n/n)$   $\sum_{n=1}^{\infty} (1/n^2 + (-1)^n/n)$   $\sum_{n=1}^{\infty} (1/n^2 + (-1)^n/n)$  and the series therefore converges.
