Chapter 33 Invertebrates Lecture Outline Overview Invertebrates —animals without a backbone—account for 95% of known animal species and all but one of the roughly 35 animal phyla that have been described. More than a million extant species of animals are known, and at least as many more will probably be identified by future biologists. Invertebrates inhabit nearly all environments on Earth, from the scalding water of deep-sea hydrothermal vents to the rocky, frozen ground of Antarctica.
