(Key topics: exploring the Periodic Table, elements, fingerprints, noble gases, argon, chemical bonds, atom, electron, chemical bonding, fluorine, chlorine, bromine, iodine, astatine, halogens, acids, bases, salts, covalent compounds, water, ice, solutions, aquifers) IPC consists of twelve chapters of text and twelve companion student activity books. This course introduces students to the people, places and principles of physics and chemistry. It is written by internationally respected scientist/author, John Hudson Tiner, who applies the vignette approach which effectively draws readers into the text and holds attention. The author and editors have deliberately avoided complex mathematical equations in order to entice students into high school level science. Focus is on the people who contributed to development of the Periodic Table of the Elements. Students learn to read and apply the Table while gaining insight into basic chemistry and physics. This is one of our most popular courses among high school students, especially those who have a history of under-performance in science courses due to poor mathematical and reading comprehension skills. The course is designed for two high school transcript credits. Teachers may require students to complete all twelve chapters for two transcript credits or may select only six chapters to be completed for one transcript credit for Physical Science, Physics, or Chemistry. Compliance with state and local academic essential elements should be considered when specific chapters are selected by teachers. As applicable to local policies, transcript credit may be assigned as follows when students complete all 12 chapters: Physical Science for one credit and Chemistry for one credit, or Integrated Physics and Chemistry for two credits. (May require supplemental local classes/labs)

A STRATEGIC BOOK THAT GIVES YOU A SURE SHOT COMPETITIVE EDGE § Competitive exams test the conceptual knowledge of students along with time management skills. However, several students generally do not get the expected rank/score despite knowing all the concepts. § It is an irony that students spend several precious hours and parents spend huge money running from one coaching institute to another, but nobody guides them on time management right from the beginning, and when students attend crash courses (about 1-2 months before competitive exam), they hardly have any time to master these skills. § The author of this book strongly believes that with proper and timely strategic guidance on time management, every student can achieve well in Competitive Exams. § This book has the strength to cover the entire syllabus in 10 days. For fast track coverage of the entire course/ online coaching, students can contact the author at monicabhandari.books@gmail.com. § This book encompasses 10 chapters. Each chapter starts with a quick review of the important concepts followed by shortcuts, tips & tricks. The strategic manner in which topics are inter-linked in this book will help in building a strong conceptual clarity among the students. For illustration, questions from previous years papers of JEE and NEET with accurate & shortest possible solutions are provided along with each topic. The questions are based on the author's interactions with students who had appeared in the aforementioned competitive exams in the past years. Solving the carefully handpicked questions given in this book, students will find themselves at ease with the Chemistry paper in any Competitive as well as Board examination. This book will enable the students with advanced abilities to attempt maximum number of questions accurately within the stipulated time. § Remember! Practice is the key to success. So, practice more and more questions on each and every topic from a good question bank. § And here's the last but not the least and the most important tip - revise all your incorrectly attempted questions repeatedly and bookmark important questions so that you gain perfection in attempting questions having similar concept or trick. IT'S NOT ALWAYS ABOUT STUDYING HARD, BUT STUDYING SMART!! Regards, Dr. Monica Bhandari

The development of university organic chemistry curricula and the trend towards modularisation of chemistry courses has driven the need for smaller, highly focussed and accessible organic chemistry textbooks, which complement the very detailed "standard texts", to guide students through the key principles of the subject. This concise and accessible book provides organic chemistry notes for students studying chemistry and related courses at undergraduate level, covering core organic chemistry in a format ideal for learning and rapid revision. The material is organised so that fundamental concepts are introduced early, then built on to provide an overview of the essentials of functional group chemistry and reactivity, leading the student to a solid understanding of the basics of organic chemistry. Graphical presentation of information is central to the book, to facilitate the rapid assimilation, understanding and recall of critical concepts, facts and definitions. Students wanting a comprehensive and accessible overview of organic chemistry to build the necessary foundations for a more detailed study will find this book an ideal source of the information they require. In addition, the structured presentation, highly graphical nature of the text and practice problems with outline answers will provide an invaluable framework and aid to revision for students preparing for examinations.
