impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for

Sole

evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part

Sole

Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

The book describes the difficulties of the current international corporate income tax system. It starts by describing its origins and how changes, such as the development of multinational enterprises and digitalization have created fundamental problems, not foreseen at its inception. These include tax competition—as governments try to attract tax bases through low tax rates or incentives, and profit shifting, as companies avoid tax by reporting profits in jurisdictions with

Sole

lower tax rates. The book then discusses solutions, including both evolutionary changes to the current system and fundamental reform options. It covers both reform efforts already under way, for example under the Inclusive Framework at the OECD, and potential radical reform ideas developed by academics.

learning of this complex subject. This text is appropriate for anyone--nurses, physician assistants, cardiovascular technicians, allied health professionals, paramedics, medical students, and physicians--wishing to learn how to accurately interpret based on a solid understanding of electrophysiology and pathophysiologic mechanisms in the heart, and how these translate to the rhythm strip. It is also an excellent reference text for instructors wishing to expand their knowledge of arrhythmia interpretation. This edition includes full coverage of wide-complex tachycardias in four

The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that

code of practice, which has statutory force, provides information and guidance about how the Act should work in practice. It explains the principles behind the Act, defines when someone is incapable of making their own decisions and explains what is meant by acting in someone's best interests. It describes the role of the new Court of Protection and the role of Independent Mental Capacity Advocates and sets out the role of the Public Guardian. It also covers medical treatment and the way disputes can be resolved. TM.

This book provides detailed and specific information on the theoretical concepts in immunology that are applicable to the laboratory sciences, underlying theories of procedures that are applicable to specific disorders, and selected disorders that are relevant to clinical laboratory science. The 3rd edition is a comprehensive, readable, student-friendly text featuring revised content and new, up-to-date information. The first two sections of the book provide foundation knowledge and skills that progress from basic immunologic mechanisms and serologic concepts,

to the theory of laboratory procedures such as automated techniques. The final two sections emphasize medical applications that are relevant to clinical laboratory science, addressing representative disorders of infectious and immunologic origin as well as topics such as transplantation and tumor immunology. Each chapter begins with an outline and learning objectives, ending with a summary, review questions, and a bibliography. Most chapters also contain case studies and procedures that challenge readers to apply their knowledge to real-life situations. Instructor resources are available to qualified adopters; contact your sales representative for more information. Step-by-step procedures throughout the book combine both the immunological theories presented in the text with real-

life laboratory tests. Comprehensive coverage presents the range of issues students need to learn in immunology and serology, also serving as an effective bench reference for practitioners. Various features such as the Chapter Outline, Learning Objectives, Procedures, Case Studies, Chapter Highlights, Review Questions, and Bibliography reinforce the most important points in each chapter and make information more memorable, eliminating the need for a separate study guide or lab manual. A vibrant two-color design enhances the text, illustrations, tables, and boxes to highlight important features. A glossary in the back of the book gives students convenient reference to succinct, accurate definitions of important words. New chapters - Molecular Techniques (Chapter 11),

Bone Marrow Transplantation (Chapter 29), and Tumor Immunology (Chapter 30) - provide cutting-edge information to make the book more complete. New content covers the latest safety information, the newest diagnostic methods and therapeutics for AIDS, up-to-date information on understanding vaccines, inclusion of Apoptosis in the cell cycle, updated lymphocyte membrane characteristics, and a revised list of cytokines with immunologic functions. The chapter on Tick-Borne Diseases (Chapter 16) has been expanded to include Borreliosis and Ehrlichiosis in addition to new information on Lyme Disease. The chapter on The Cells and Cellular Activities of the Immune System: Lymphocytes and Plasma Cells (Chapter 4) has been revised to include T-Lymphocyte Membrane

and disposal of vaccines, surveillance and monitoring, and the Vaccine Damage Payment Scheme; the second section covers the range of different diseases and vaccines.

This publication sets out the statutory requirements for signing, lighting, and guarding at street works and road works. This is the core reference manual for utility companies, local authorities, street work contractors and others whose day-to-day business involves street works (works by statutory undertakers and other utility companies etc) and road works (works to maintain or repair road infrastructure). The code, which covers all of the UK and includes national variations, is now compulsory for highway/road authorities in England, Wales and Northern Ireland. It applies to all single carriageway roads and dual

carriageways with a speed limit of 40 mph or less. The code is now divided into three parts: Basic Principles, Operations, and Equipment and Vehicles; site layout diagrams have been redrawn to make them easier to understand. There is: increased emphasis on using risk assessment and guidance on what to consider in such assessments; strengthened guidance on providing for pedestrians and cyclists and new guidance on traffic control measures related to road closures, one-way working and temporary road obstructions; enhanced advice on other traffic control measures including works near tramways and railways, and mobile/short duration works; and updated advice on high visibility clothing and the signing and conspicuity requirements for work vehicles.
