application 8A15\$1888 10-17-97 10:35:43 crra W-Color Res BK REV spent a lot of time working with visual displays and learned quite how they work. This chapter helped to increase my understanding of the color measurement of displays.

~~Colour Physics for Industry, second edition, Color ...~~

Physical and chemical causes of colour. According to the law of energy conservation, energy can be converted from one form to another, but cannot be created or destroyed. Consequently, when a photon of light is absorbed by matter, usually by an atom, molecule, or ion or by a small group of such units, the photon disappears and its energy is gained by the matter.

~~Colour—Physical and chemical causes of colour | Britannica~~

Colour, also spelled color, the aspect of any object that may be described in terms of hue, lightness, and saturation. In physics, colour is specifically with electromagnetic radiation of a certain range of wavelengths visible to the human eye. Radiation of such wavelengths occupies a portion of the electromagnetic spectrum known as the visible spectrum—i.e., light.

~~color | Definition, Perception, Types, & Facts | Britannica~~

Color Physics Technically speaking, colors are the way our brain, by use of our eyes, interprets electromagnetic radiation of a wavelength in the visible spectrum. Visible light lies between 400 and 700 nanometers. The different wavelengths are seen as different colors, as in the spectrum.
