Combustion Engineering, Second Edition maintains the same goal as the original: to present the fundamentals of combustion science with application to today's energy challenges. Using combustion applications to reinforce the fundamentals of combustion science, this text provides a uniquely accessible introduction to combustion for undergraduate students, first-year graduate students, and professionals in the workplace.

Abstract. Chapter 1 discusses basic chemical

thermodynamics and flame temperatures for combustion analysis. Heats of reaction, free energy, and equilibrium constants are introduced and then applied for the analysis of chemical equilibrium composition and adiabatic flame temperature of fuel–oxidizer mixtures. The effects of mixture equivalence ratio and pressure on the flame temperature and composition are discussed along with practical considerations.

Combustion, Fourth Edition

For more than twenty years, Combustion

Science & Engineering, Inc. (CSE) has been

dedicated to the study, advancement, and

application of combustion and fire science.

Combining a wealth of knowledge and

experience, from the private to public sector,

from academia to industry, CSE's spirited

partnership and dedicated team offers

exceptional technical leadership, intelligent

solutions in combustion and fire protection, and superior fire and explosion investigations.

Combustion Theory delves deeper into the science of combustion than most other texts and gives insight into combustions from a molecular and a continuum point of view. The book presents derivations of the basic equations of combustion theory and contains appendices on the background of subjects of thermodynamics, chemical kinetics, fluid dynamics, and transport processes.

The objective of the course is to provide background in theoretical combustion science. Most of the material in the notes is covered in one semester; some extra material is also included. The goal of the notes is to provide a solid mathematical foundation in the physical chemistry, thermodynamics, and fluid mechanics of combustion.
