CONDITIONAL PROBABILITY

PROBLEMS WITH SOLUTIONS Problem

1 : A problem in Mathematics is given to three students whose chances of solving it are $\frac{1}{3}$, $\frac{1}{4}$ and $\frac{1}{5}$ (i) What is the probability that the problem is solved? (ii) What is the probability that exactly one of

Download Free Conditional Probability Questions And Solutions

them will solve it?

Conditional Probability Problems with Solutions

We answer the questions on finding conditional probabilities using two methods: 1) the definition and 2) restriction of the sample space. a) Using

Download Free Conditional Probability Questions And Solutions

conditional probability definition \(\mathbb{P}(\text{black} | \text{Van}) = \frac{\mathbb{P}(\text{black and Van})}{\mathbb{P}(\text{Van})} = \frac{25/200}{50/200} = 1/2 \backslash\)

Solution: The formula of Conditional

Download Free Conditional Probability Questions And Solutions

probability Formula is: $P(B|A) = \frac{P(A \cap B)}{P(A)}$
 $P(\text{Absent} | \text{Friday}) = \frac{P(\text{Absent and Friday})}{P(\text{Friday})} = \frac{0.03}{0.2} = 0.15 = 15\%$.
Question 2: A teacher gave her students of the class two tests namely maths and science. 25% of the students passed both the tests and 40% of the students passed the maths test.

Conditional Probability Formula With Solved Example Questions

What is the probability that both children are girls? In other words, we want to find the probability that both children are girls, given that the family has at least one daughter named Lilia. Here you can

Download Free Conditional Probability Questions And Solutions

assume that if a child is a girl, her name will be Lilia with probability α independently from other children's names.

Solved Problems Conditional Probability
What Is Conditional Probability? The probability of an event occurring given

Download Free Conditional Probability Questions And Solutions

that another event has already occurred is called a conditional probability. Recall that when two events, A and B, are dependent, the probability of both occurring is: $P(A \text{ and } B) = P(A) \times P(B \text{ given } A)$ or $P(A \text{ and } B) = P(A) \times P(B | A)$ If we divide both sides of the equation by $P(A)$ we get the Formula for Conditional
