In reviewing introductory texts available to criminologists, one is left with the impression that biological factors are irrelevant to the formulation of criminal behavior. Where biology is mentioned at all, it receives infinitesimal coverage. This dearth of attention could at one time be blamed on shoddy research and the legitimate fear that evide

Crime Statistics suggest that Americans are not a notably law-abiding people. With some 13 million felonies reported every year, it is not surprising that few topics engage public attention and imagination more compellingly than the dynamics of criminal behavior. Volume and ubiquity alone might suggest the psychology of criminal behavior is well understood and there exists an integrated body of explanatory theory and empirical evidence. But in fact only fragmentary and incomplete accounts have thus far appeared. Criminal Behavior is virtually unique in providing a comprehensive psychological paradigm that fits across variant species of crime, while meeting the requirements of science and the needs of law enforcement and administration of justice in controlling criminal behavior. The authors begin this remarkable text by outlining a model for criminal behavior based not on abnormal psychology but on the tenets of social learning theory. They illuminate the processes by which criminal activity is initiated and repeated, including personal constructs, stimulus determinants, and behavioral repertoires. They define four process elements that interact in precipitating criminal behavior-inclination, opportunity, expectation of reward, expectation of impunity. They show how these process elements are regulated and confined by a series of complex and variable boundary conditions in specific criminal offenses. Conceptual, methodological, and operational constraints on the study of criminal behavior are defined, and statistically and behavioral science data bearing upon larceny and homicide, two

crimes at diametric extremes, are examined in detail. Pallone and Hennessy locate and define those psychological variables that render comprehensible the process whereby formally criminal acts are construed as possible and desirable by individual actors and show how those actors self-select psychosocial environments that facilitate or at least do not impede the commission of crime. They identify and explain the phenomenon of 'tinderbox violence.' Its comprehensive perspective and balanced consideration of competing viewpoints make *Criminal Behavior* an ideal text for students and teachers of criminology and of the psychology of criminal behavior. It is also a pioneering work for psychologists, sociologists, criminologists, and law-enforcement official.

from a psychological perspective. More specifically, adults and juveniles who violate the law or who act antisocially are portrayed as embedded in and continually influenced by multiple systems within the psychosocial environment. Meaningful theory, well executed research, and skillful application of knowledge to the "crime problem" require an understanding of the many levels of events that influence a person's life course—from the individual to the individual's family, peers, schools, neighborhoods, community, culture, and society as a whole"--

What is the job of a "criminal profiler" really like?

We see these roles played out nightly on tv shows

and in the news, but how does law enforcement

today actually use empirical data to correctly

assess behaviour and help solve crimes,

particularly serial crimes? Criminal and Behavioral

Profiling, written by well-established authors Curt

and Anne Bartol, presents a realistic and

empirically-based look at the theory, research, and

practice of modern criminal profiling, or, as it's

more professionally termed, behavioural analysis or

behavioural investigative analysis. Designed for use in a variety of criminal justice and psychology courses, the book delves into the process of identifying distinctive behavioural tendencies, geographical locations, demographic, and biographical descriptors of offenders, and personality traits, based on characteristics of the crime. Timely literature and case studies from the rapidly growing international research in criminal profiling help students understand the best practices, major pitfalls, and psychological concepts that are key to this process.
