This book examines in detail the role of transfontanellar pulsed and color Doppler imaging in the fetus and neonate. After an introductory chapter its use in the normal neonate is considered. Results of the hemodynamic evaluation of 491 newborns aged from 32 weeks gestation to 9 months by means of pulsed and color Doppler are reported. Normal values of the resistive index as determined by this technique are documented, and systolic, diastolic, and mean velocities in seven different vessels are presented. It is concluded that ultrasonography enables reliable analysis of arterial and venous velocities. Subsequent chapters examine the use of transfontanellar Doppler imaging in a variety of commonly encountered pathological conditions.

R is a powerful tool for statistics and graphics, but getting started with this language can be frustrating. This short, concise book is for beginners with a selection of how-to recipes to solve simple problems with R. Each solution gives you just what you need to know for basic statistics, graphics, and regression. You'll find recipes on reading data files, creating data frames, computing basic statistics, testing means and correlations, creating a scatter plot, performing simple linear regression, and many more. These solutions are taken from O'Reilly's R Cookbook, which contains more than 200 recipes for R that you'll find useful once you move beyond the basics. *25 Recipes for Getting Started with R* O'Reilly Media, Inc."

This book includes 15 full-length papers submitted for the Fourth International Conference on Aging, Disability and Independence (ICADI). These papers reflect five ICADI tracks: Livable Homes and Communities, Smart Homes and Robotics, Transportation, Vocational Rehabilitation, Assistive Technology and one ICADI theme: Consumer Perspective. The major focus of this publication is on aging and disability services, research development and policy, bringing together a rich mix of motivated and talented individuals (multi-disciplinary and cross-disciplinary) engaged in different sectors and types of organizations) who ultimately impact these services. Further, the aim is to provide a platform for researchers to learn more about the successes, challenges and different approaches to the independence-related needs of elders in different cultures. This book is of interest to research and development personnel, practitioners/service providers, policymakers, business representatives, consumers, professional and graduate students.

The New Thought movement of the turn of the twentieth century combined Christian spirituality with paranormal power in an effort to give practical expression to the

forces of the universe. Or so its proponents believed. One of the most influential thinkers of this early New Age philosophy promises here, in this 1913 book, to show the reader how to develop your personality and how to develop a dominating influence through such exercises as: Projecting Nerve Force Mental Radiation The Positive Aura The Magnetic Duel Magnetic Self-Defence The Power of Controlling Others The roots of today's groundswell for self-help, personal empowerment, and pop spirituality can be explored in this one small, highly entertaining book. Also available from Cosimo Classics: The Advanced Course in Personal Magnetism, by Theron Q. Dumont. THERON Q. DUMONT is an alias and pen name of American writer WILLIAM WALKER ATKINSON (1862-1932), editor of the popular magazine New Thought from 1901 to 1905, and editor of the journal Advanced Thought from 1916 to 1919. He authored dozens of New Thought books under numerous pseudonyms, including Yogi, some of which are likely still unknown today.

Current with Codes through 2014 A carefully selected group of home wiring projects that goes beyond the basics of adding a receptacle or rewiring a lamp. With the information in this book you can take your skill in working with electrical systems to a new level. Projects include: adding a stand-alone, direct-current circuit powered by the sun; installing an automatic standby power system; replacing a main service panel; grounding and bonding your electrical system; installing a radiant flooring system; and working with 240-volt and three-phase power.

When Spenser is approached by Walter Clive, president of the Three Fillies Stables, to find out who is threatening his horse, Hugger Mugger, he can hardly say no: he's been doing pro bono work for so long his cupboards are just about bare. Disregarding the resentment of the local Georgia law enforcement, Spenser accepts the case. But it soon takes a deadly turn when the attacker claims a human victim, and Spenser must revise his impressions of the Three Fillies organisation - and watch his own back as well. 'Robert B Parker's Spenser is one of the best private detectives in fiction' - Sunday Telegraph

Intergovernmental agencies, governments, and non-governmental organizations are now using Information and Communications Technologies (ICTs) to collect, organize, and disseminate information on peoples' rights, the promotion of human rights, and the protection of

individuals and communities at risk. Human Rights and Information Communication Technologies: Trends and Consequences of Use will provide a comprehensive examination of the use and application of information and communication technologies in the world of human rights. This will contribute significantly to understandings of the impact of ICTs on the promotion and protection of human rights in societies around the world. This book will provide a valuable tool and insight for academics from a range of fields, including information management, information systems, communications, information technology, international relations, human rights, politics, law, and sociology. It will also be useful to international non-governmental organizations, non-governmental organizations, and governments for policy and practice.

A systematic approach towards integration of design and manufacturing is essential for optimizing all elements of the integrated manufacturing system. This book is an attempt towards this approach and is intended to provide an introduction to the design process, the manufacturing processes and the tools for integration to young engineering students. Fundamental information on materials, manufacturing processes and integrated manufacturing are provided which will help the designer in the selection of most appropriate materials, processes and methods to transform his ideas into a successful product.

Formally known as Exercises in Health Claims Examining, The Practice of Health Claims Examining, 2e, contains a simulated work program to help you experience the real life situations that a claims examiner experiences on a daily basis. This book is created for use in conjunction with ICDC Publishing's Guide to Health Claims Examining. Some of the exercises in the simulated work portion of the book are based upon concepts learned in the Guide to Health Claims Examining (i.e., procedures for processing claims, interpretation of contracts, understanding UCR and deductibles, etc.). This book alone should not be considered a complete text for learning health claims examining. It is suggested that a trainee take a complete health claims examining course prior to using this book. The simulated work portion of this text incorporates concepts which are not taught by simple data entry, for example UCR calculations, privacy guidelines, client record keeping, correspondence, and manual completion of claims processing. This text is designed to allow the student to work through the material at their own pace.

The Gate to Women's Country tells of a society that exists three hundred years after our own has nearly destroyed itself. Now, male warriors are separated from women at an early age and live in garrisons plotting futilely for the battles which must never be fought again. Inside the women's towns, education, arts and science flourish. But for some like Stavia, there is more to see. Her sojourn with the man she is forbidden to love brings into sharp focus the contradictions that define their lives. And when tragedy strikes, Stavia is faced with a decision she never thought she would make - a decision that could forever change their world ... The Gate to Women's Country is a novel that rivals Margaret Atwood's The Handmaid's Tale in scope, impact, and the sheer power of its storytelling.

Many regulations issued by the U.S. Environmental Protection Agency (EPA) are based on the results of

computer models. Models help EPA explain environmental phenomena in settings where direct observations are limited or unavailable, and anticipate the effects of agency policies on the environment, human health and the economy. Given the critical role played by models, the EPA asked the National Research Council to assess scientific issues related to the agency's selection and use of models in its decisions. The book recommends a series of guidelines and principles for improving agency models and decision-making processes. The centerpiece of the book's recommended vision is a life-cycle approach to model evaluation which includes peer review, corroboration of results, and other activities. This will enhance the agency's ability to respond to requirements from a 2001 law on information quality and improve policy development and implementation.

Since the mid 1990s, data hiding has been proposed as an enabling technology for securing multimedia communication and is now used in various applications including broadcast monitoring, movie fingerprinting, steganography, video indexing and retrieval and image authentication. Data hiding and cryptographic techniques are often combined to complement each other, thus triggering the development of a new research field of multimedia security. Besides, two related disciplines, steganalysis and data forensics, are increasingly attracting researchers and becoming another new research field of multimedia security. This journal, LNCS Transactions on Data Hiding and Multimedia Security, aims to be a forum for all researchers in these emerging fields, publishing both original and archival research results. The six papers included in this issue deal with watermarking security, perceptual image hashing, infrared hiding, steganography and steganalysis.

A well balanced survey of ethics presented through applications to the criminal justice system. The text introduces the reader to ethical decision making in the first chapter and then moves through three major ethical perspectives: virtue, formalism, and utilitarianism. The text then moves to the social and criminal justice context where ethics is discussed in separate chapters as it relates to law, police, courts, and corrections, and liability in general. The final chapter looks to the future development of ethics in everyday life.

An attractive manner is assured if we will avoid the following: Sarcasm, impertinence, ridicule, hot temper, profanity, roughness, brutality, vulgarity, a loud voice, and grouchiness.-from Chapter III, "The Development of Your Magnetic Power" The New Thought movement of the turn of the twentieth century combined Christian spirituality with the paranormal in order to give practical expression to the forces of the

universe. Or so its proponents believed. One of the most influential thinkers of this early "New Age" philosophy promises here, in this 1914 book, to share "in a condensed, non-mystical style all I have been able to learn of this wonderful power" of personal magnetism. In this day where research grants are the primary focus, many young investigators are thrown into neurosciences courses without any prior preparation in neuroanatomy. This book is designed to help prepare them by introducing many of the fundamentals of the nervous system. It represents the essentials of an upper level biology course on the central nervous system. It is not designed to be a clinical approach to the nervous system, but rather it approaches the nervous system from a basic science perspective that intertwines both structure and function as an organizing teaching and learning model. Medical and dental examples are included but the main focus is on neuroscience.

PowerPivot is an amazing new add-in for Excel 2013 that allows business intelligence pros to process large amounts data. Although it is simple to use in a demo environment, analysts are likely to run into real-life scenarios that are difficult to solve. This guide, dedicated solely to the PowerPivot tool, provides techniques and solutions to real-world problems, including showing the Top N customers by using slicer filters, comparing budget to actuals, drilling across data instead of through data, and joining data from two different sources in a single analysis.

Boundaries of Evolution describes the unlikelihood of evolutionary theory to explain how it is supposed to scale three major biological cliffs. The first cliff is the need for a logical explanation of how random chemical reactions could produce the first living cell from the primordial soup. The second is the problem of explaining how the first single-celled eukaryote evolved from a prokaryote. Mathematical improbabilities of evolutionary theory to scale the first two cliffs, in the time available, are demonstrated. The third insurmountable cliff is the necessity for a reasonable explanation of how millions of different kinds of multi-celled eukaryotes could have quickly evolved from single-celled eukaryotes. Random mutations occurring in DNA, accepted or rejected by natural selection, are hailed as the source of advancement for the increase in biotic complexity. The most common time for mutations to

occur in the DNA is during replication. Therefore, evolutionary advancement should occur faster in biota with the most frequent replication cycles. If both evolutionary theory and the fossil record are correct, prokaryotes, which replicate in as little as 20 minutes took 2 billion years to evolve the first single-celled eukaryote. Single-celled eukaryotes, generally having shorter reproductive times than multi-celled eukaryotes, took another billion years to evolve the first multi-celled eukaryote. Then during Cambrian times, the multi-celled eukaryotes with the longest reproductive cycles literally exploded in diversity in a comparatively short time. How could this be? Other inadequacies of Darwin's theory are presented for everyone to see.

In his latest writings on the history of literacy and its importance for present understanding and future rethinking, historian Harvey J. Graff continues his critical revisions of many commonly held ideas about literacy. The book speaks to central concerns about the place of literacy in modern and late-modern culture and society, and its complicated historical foundations. Drawing on other aspects of his research, Graff places the chapters that follow in the context of current thinking and major concerns about literacy, and the development of both historical and interdisciplinary studies. Special emphasis falls upon the usefulness of "the literacy myth" as an important subject for interdisciplinary study and understanding. Critical stock-taking of the field includes reflections on Graff's own research and writings of the last three decades, and the relationships that connect interdisciplinary rethinking and the literacy myth. The collection is noteworthy for its attention to Graff's reflections on his identification of "the literacy myth" and in developing LiteracyStudies@OSU (Ohio State University) as a model for university-wide interdisciplinary programs. It also deals with ordinary concerns about literacy, or illiteracy, that are shared by academics and concerned citizens. These nontechnical essays will speak to both academic and nonacademic audiences across disciplines and cultural orientations.

Completely revised and updated, taking the scientific rigor to a whole new level, the second edition of the Occupational Ergonomics Handbook is now available in two volumes. This new organization demonstrates the enormous amount of advances

that have occurred in the field since the publication of the first edition. The editors have brought together "A bestseller since the first edition, The Little, Brown Handbook provides reliable and thorough coverage of handbook basics--the writing process, grammar and usage, research and documentation--while also giving detailed discussions of critical reading, academic writing, reading and writing arguments, writing in the disciplines, and public writing. Widely used by both experienced and inexperienced writers, The Little, Brown Handbook works as both a comprehensive classroom text and an accessible reference guide. The twelfth edition of The Little, Brown Handbook provides all the resources that instructors have come to expect but with an added media component. Students who purchase the e-text or iPad version of this handbook will benefit from added instruction and practice through exercises, tutorials, podcasts, and sample papers. The Little, Brown Handbook builds on its best-selling features with five emphases: (1) media-rich eText and iPad versions, including video tutorials, podcasts, sample documents, exercise, and checklists;(2)academic writing, including a new introduction on joining the academic community, new coverage of genre, more on summary and academic integrity, and four new sample academic papers; (3) research writing, including new material on finding and evaluating Web sites, social-networking sites, blogs, wikis, and multimedia; (4) thorough and up-to-date documentation guidelines, including the most recent versions of MLA, APA, Chicago, and CSE styles with models of new media in each style and new annotated sample sources; (5) the writing process, including new material on genre and strengthened discussions of the thesis and paragraphs"--Pearson website.

Impelled by a demand for increasing American strength in the new global economy, many educators, public officials, business leaders, and parents argue that school computers and Internet access will improve academic learning and prepare students for an information-based workplace. But just how valid is this argument? In *Oversold and Underused*, one of the most respected voices in American education argues that when teachers are not given a say in how the technology might reshape schools, computers are merely souped-up typewriters and classrooms continue to run much as they did a generation ago. In his studies of early childhood, high school, and university classrooms in Silicon Valley, Larry Cuban found that students and teachers use the new technologies far less in the classroom than they do at home, and that teachers who use computers for instruction do so infrequently and unimaginatively. Cuban points out that historical and organizational economic contexts influence how teachers use technical innovations. Computers can be useful when teachers sufficiently understand the technology themselves, believe it will enhance learning, and have the power to shape their own curricula. But these conditions can't be met without a broader and deeper commitment to public education beyond preparing workers. More attention, Cuban says, needs to be paid to the civic and social goals of schooling, goals that make the question of how many computers are in classrooms trivial.

Routledge Handbook of Heritage in Asia

***This Handbook is the first major volume to examine the conservation of Asia's culture and nature in relation to the wider social, political and economic forces shaping the region today. Throughout Asia rapid economic and social change means the region's heritage is at once under threat and undergoing a revival as never before. As societies look forward, competing forces ensure they re-visit the past and the inherited, with the conservation of nature and culture now driven by the broader agendas of identity politics, tradition, revival, rapid development, environmentalism and sustainability. In response to these new and important trends, the twenty three accessible chapters here go beyond sector specific analyses to examine heritage in inter-disciplinary and critically engaged terms, encompassing the natural and the cultural, the tangible and intangible. Emerging environmentalisms, urban planning, identity politics, conflict memorialization, tourism and biodiversity are among the topics covered here. This path-breaking volume will be of particular interest to students and scholars working in the fields of heritage, tourism, archaeology, Asian studies, geography, anthropology, development, sociology, and cultural and postcolonial studies.***
